APPLICATIONS

Lot Code Verification

The T4x-Series smart camera series provides the right amount of software tools, processing power and sensor resolution to read and verify lot and date codes while being able to survive the harsh wash down environments of production lines. With our OCR software tool and sealed communication connectors, inspection data for product tracking and signaling can be quickly setup and easily transmitted to receiving devices such as PCs, PLCs, control systems, robots and other industrial devices.

Precision Repeating Measurement

Designed with high quality CCD sensors, locating and precision software measurement tools, the T4x-Series smart cameras can improve your efficiency by providing accurate and repeatable gauging data for hundreds of measurements - in only 10ths of a second.

Pattern Finding

The powerful pattern finding algorithm provides robust locating of unique shapes even when there are similar products in the inspection image. Light insensitive and scaling capable, this tool provides incredible results even in noisy images and is included as a standard software tool in the T4x-Series smart camera products.
