

## Model RB500

*The RB500 is a High Quality 500 plus CFM cartridge style dust collector. This heavy duty collector is built entirely from 12 guage steel and is 100% hand welded. This means it is very durable and has no seams that can leak dust. The pleated cartridge filter is loaded from the top of the cabinet which is a very unique design that insures a tight seal. Cleaning the filter is accomplished at the turn of a handle which releases air inside the filter to purge dust from the filter. The sump is then emptied from the bottom of the collector.*
