
OWNER'S MANUAL

Mini-Cat AIR POWERED CHAIN HOIST AH SERIES 250 and 500 Lb. Capacity

Product Code and Serial Number

WARNING

This equipment should not be installed, operated or maintained by any person who has not read and understood all the contents of this manual. Failure to read and comply with the contents of this manual can result in serious bodily injury or death, and/or property damage.

1.0 Important Information and Warnings

1.1 Terms and Summary

This manual provides important information for personnel involved with the installation, operation and maintenance of this product. Although you may be familiar with this or similar equipment, it is strongly recommended that you read this manual before installing, operating or maintaining the product.

Danger, Warning, Caution and Notice

Throughout this manual there are steps and procedures that can present hazardous situations. The following signal words are used to identify the degree or level of hazard seriousness.

⚠ DANGER Danger indicates an imminently hazardous situation which, if not avoided, **will** result in **death or serious injury**, and property damage.

⚠ WARNING Warning indicates an imminently hazardous situation which, if not avoided, **could** result in **death or serious injury**, and property damage.

⚠ CAUTION Caution indicates a potentially hazardous situation which, if not avoided, **may** result **minor or moderate injury** or property damage.

NOTICE Notice is used to notify people of installation, operation, or maintenance information which is important but not directly hazard-related.

⚠ CAUTION

These general instructions deal with the normal installation, operation, and maintenance situations encountered with the equipment described herein. The instructions should not be interpreted to anticipate every possible contingency or to anticipate the final system, crane, or configuration that uses this equipment. For systems using the equipment covered by this manual the supplier and owner of the system are responsible for the system's compliance with all applicable industry standards, and with all applicable Federal, State, and Local regulations/codes.

This manual includes instructions and parts information for a variety of hoist types. Therefore, all instructions and parts information may not apply to any one type or size of specific hoist. Disregard those portions of the instructions that do not apply.

Record your hoist's Product Code and Serial Number (see Figure 10-1) on the front cover of this manual for identification and future reference to avoid referring to the wrong manual for information or instructions on installation, operation, inspection, maintenance, or parts.

Use only Harrington authorized replacement parts in the service and maintenance of this hoist.

WARNING

Equipment described herein is not designed for and **MUST NOT** be used for lifting, supporting, or transporting people, or for lifting or supporting loads over people.

Equipment described herein should not be used in conjunction with other equipment unless necessary and/or required safety devices applicable to the system, crane, or application are installed by the system designer, system manufacturer, crane manufacturer, installer, or user.

Modifications to upgrade, rerate, or otherwise alter this equipment shall be authorized only by the original equipment manufacturer.

Equipment described herein may be used in the design and manufacture of cranes or monorails. Additional equipment or devices may be required for the crane and monorail to comply with applicable crane design and safety standards. The crane designer, crane manufacturer, or user is responsible to furnish these additional items for compliance. Refer to ANSI/ASME B30.17, "Safety Standard for Top-Running Single Girder Cranes"; ANSI/ASME B30.2 "Safety Standard for Top-Running Double-Girder Cranes"; and ANSI/ASME B30.11 "Safety Standard for Underhung Cranes and Monorails".

If a below-the-hook lifting device or sling is used with a hoist, refer to ANSI/ASME B30.9, Safety Standard for Slings, or ANSI/ASME B30.20, Safety Standard for Below-the-Hook Lifting Devices.

Hoists and cranes, used to handle hot molten material may require additional equipment or devices. Refer to ANSI Z241.2, "Safety Requirements for Melting and Pouring of Metals in the Metalcasting Industry".

Failure to read and comply with any one of the limitations noted herein can result in serious bodily injury or death, and/or property damage.

WARNING

HAZARDOUS AIR PRESSURE IS PRESENT IN THE HOIST, IN THE SUPPLY OF COMPRESSED AIR TO THE HOIST, AND IN THE CONNECTIONS BETWEEN COMPONENTS.

Before performing ANY maintenance on the equipment, de-energize the supply of compressed air to the equipment, and lock and tag the supply device in the de-energized position. Refer to ANSI Z244.1, "Personnel Protection - Lockout/Tagout of Energy Sources."

Only trained and competent personnel should inspect and repair this equipment.

NOTICE

It is the responsibility of the owner/user to install, inspect, test, maintain, and operate a hoist in accordance with ANSI/ASME B30.16, "Safety Standard for Overhead Hoists" and OSHA Regulations. If the hoist is installed as part of a total lifting system, such as an overhead crane or monorail, it is also the responsibility of the owner/user to comply with the applicable ANSI/ASME B30 volume that addresses that type of equipment.

It is the responsibility of the owner/user to have all personnel that will install, inspect, test, maintain, and operate a hoist read the contents of this manual and applicable portions of ANSI/ASME B30.16, "Safety Standard for Overhead Hoists", and OSHA Regulations. If the hoist is installed as part of a total lifting system, such as an overhead crane, the applicable ANSI/ASME B30 volume that addresses that type of equipment must also be read by all personnel.

If the hoist owner/user requires additional information, or if any information in the manual is not clear, contact Harrington or the distributor of the hoist. Do not install, inspect, test, maintain, or operate this hoist unless this information is fully understood.

A regular schedule of inspection of the hoist in accordance with the requirements of ANSI/ASME B30.16 should be established and records maintained.

1.2 Warning Tags and Labels

The warning tag illustrated below in Figure 1-1 is supplied with each hoist shipped from the factory. If the tag is not attached to your hoist (for pendant and manipulator control, the warning tag is attached to the pendant hose; for the pull cord control, the warning tag is attached to the up cord), order a tag from your dealer and install it. See parts list in the parts section of this manual. Read and obey all warnings attached to this hoist. Tag is not shown actual size.

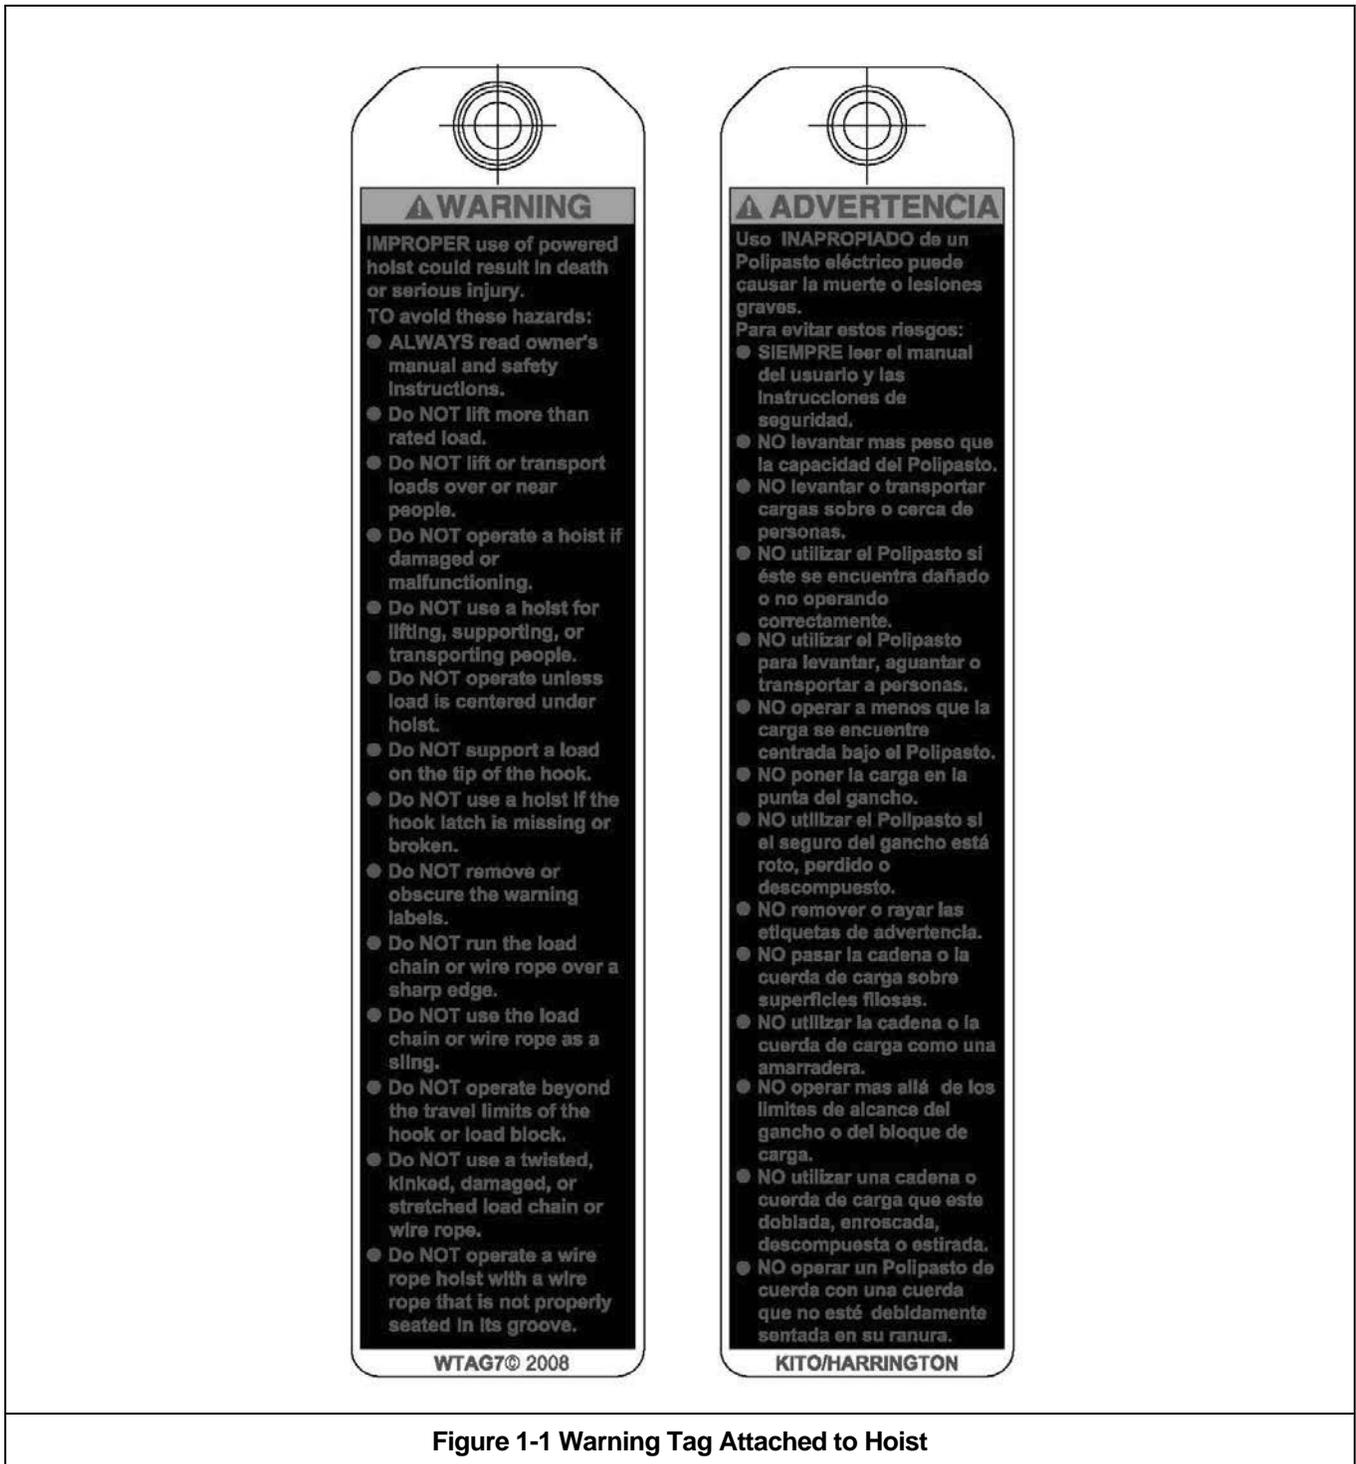

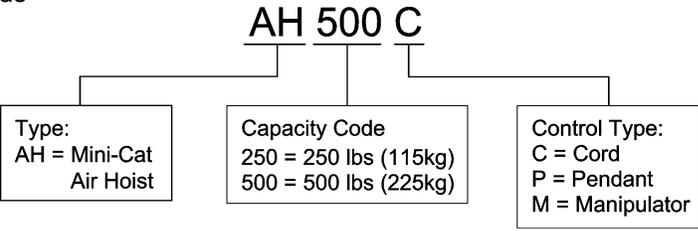

Figure 1-1 Warning Tag Attached to Hoist

2.0 Technical Information

2.1 Specifications

2.1.1 Product Code

2.1.2 Features and General Specifications:

- Weight/Size : Light weight and compact size – cord model with 10 feet (3.0 m) of lift weighs 15.2 lbs. (6.9 kg).
- Motor Brake : Reliable disc brake system
- High Speed Lifting : 26 to 47 ft/min. (7.9 to 14.3m/min.) with load
- Low Noise Levels : 76 dba @ 1 meter when lifting rated load
82 dba @ 1 meter when lowering rated load
- Valve Section : Valve made from aluminum reduces effects of corrosion
- Compatibility : Fits existing Harrington trolleys; uses existing ED load chain
- Operating Environment : Temperature range +14°F to 140°F (-10°C to 60°C)
- Duty Cycle : High Duty Cycle
- Air Lubrication Requirements : Minimum of 10 to 15 drops per minute (0.2-0.3 cc/min) of oil
- Air Filtration Requirements : Maximum 5 micron air filter or finer.
- Air Supply Pressure : 60 to 90 psi. (0.4 to 0.6 MPa.)
- Air Consumption : 19 to 34 CFM (0.54 to 0.96 cubic meters per minute).
- Air Inlet Port Size : 3/8 inch NPT
- Minimum Supply Hose Size : 3/8 inch (9.5 mm)
- Maximum Lift : 131 ft. (39.9 m) for Pendant and Cord models;
13 ft. (4.0 m) for Manipulator Model.

Table 2-1 General Specifications						
Capacity (lbs.)	Product Code	Headroom (in)	Standard Lift (ft)	Load Chain Dia. (mm) x Chain Fall Lines	Net Weight with Standard Lift (lbs.)	Weight for Additional One Foot of Lift (lbs.)
250	AH250C	12.0	10	4 x 1	15	0.26
500	AH500C	12.0	10	4 x 1	15	0.26
250	AH250P	12.0	10	4 x 1	19	0.49
500	AH500P	12.0	10	4 x 1	19	0.49
250	AH250M	33.0*	6.5	4 x 1	24	0.47
500	AH500M	33.0*	6.5	4 x 1	24	0.47

* Note: Headroom is 45.0 in. with optional 13.0 ft. lift.

500	AH500M	26 (19)	31 (24)	28 (22)	26 (20)

* Values in parentheses for air supply at 60 psi.

2.3 Part Names

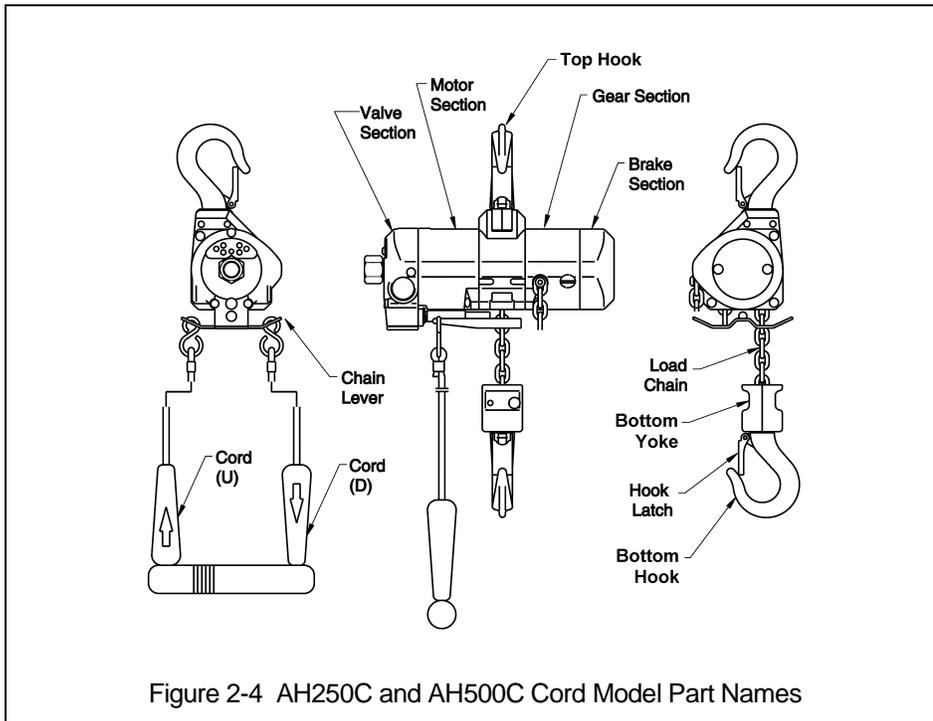

Figure 2-4 AH250C and AH500C Cord Model Part Names

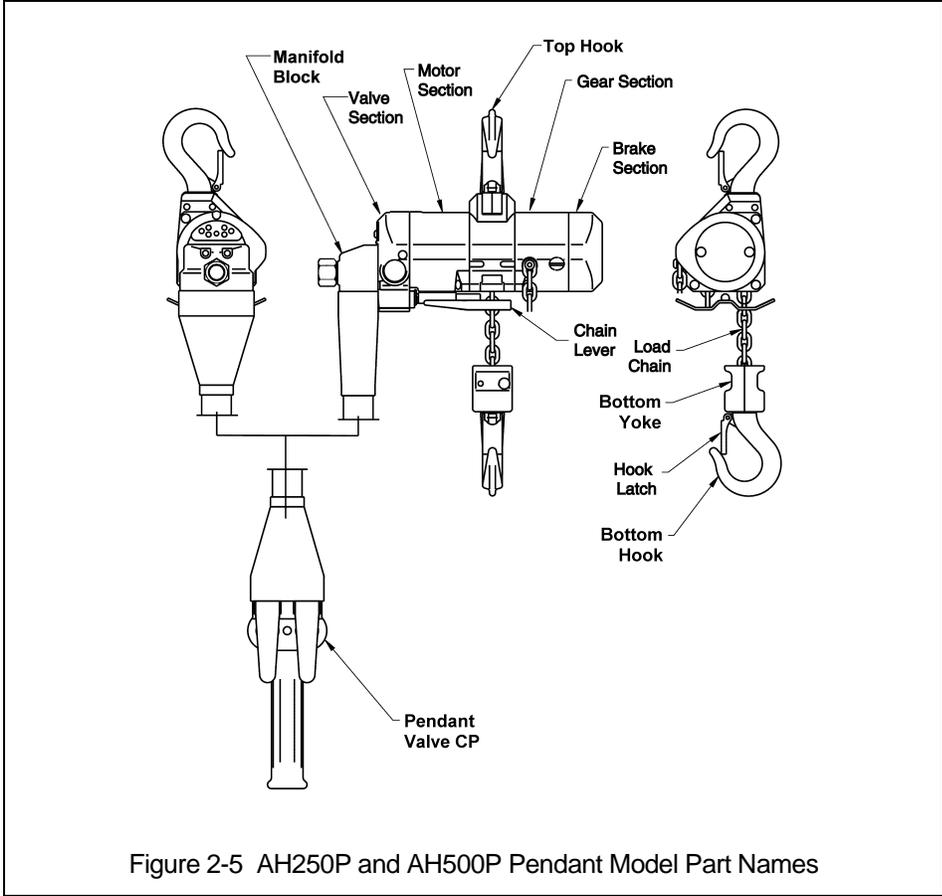

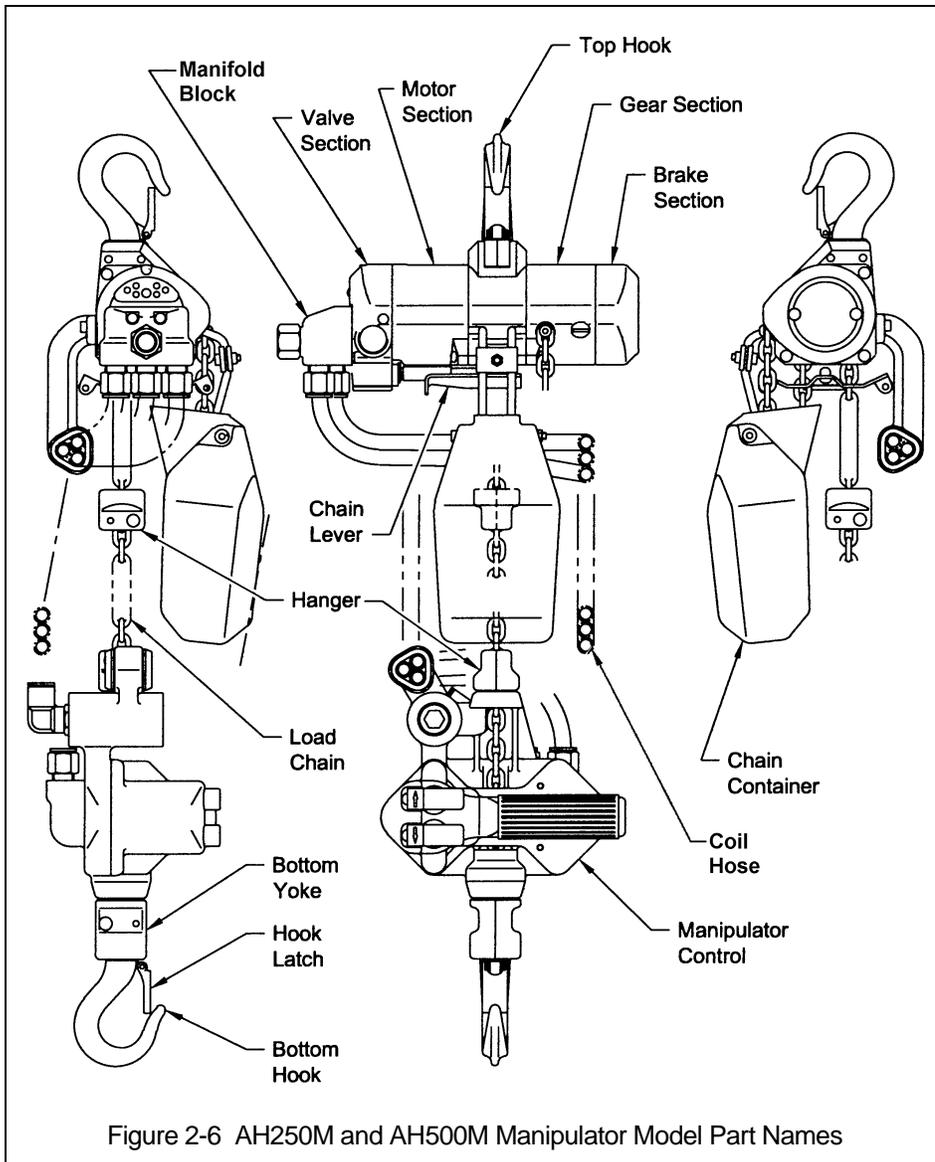

Figure 2-5 AH250P and AH500P Pendant Model Part Names

3.0 Pre-operational Procedures

3.1 Air Supply System Requirements

- 3.1.1 **NOTICE** Pressure and Flow - Verify that the air supply system has capacity to supply your air hoist with required pressure and flow. Otherwise the hoist may operate poorly or may fail to operate. See Section 3.2.
- 3.1.2 **CAUTION** Lubrication - The hoist requires lubrication for proper operation. The oil in the air supply is the primary source of lubrication to the hoist. Therefore, a dedicated air supply lubricator must be used with the hoist. Refer to Section 3.3.
- 3.1.3 **CAUTION** Air Quality - Good air quality is essential to prevent damage to your hoist and to ensure its proper operation. The air must be clean and free of debris such as dirt and rust. Refer to Section 3.4 for filtration requirements. The air must also be dry; free of moisture and water. Refer to Section 3.5.

3.2 Air Supply Capacity and Regulation

- 3.2.1 Capacity - The air supply system must be capable of delivering the required airflow (cfm or m³/min) to the hoist inlet port. Without the required airflow the hoist will not operate properly or may not operate at all. See Section 2.0 for your hoist's air consumption requirements. In determining if your system is capable of supplying the required airflow, consider the following:
- Capacity of compressor(s) and tank
 - Other air consuming equipment
 - Flow restrictions such as pipes, hoses, valves and fittings
- Inadequate capacity will cause a significant drop in pressure when the hoist is operated, and could cause poor performance or failure to operate.
- 3.2.2 Regulation - The hoist requires a constant supply of air at a pressure of between 60 and 90 psi (0.4 MPa and 0.6 MPa). If the air supply is not regulated or is regulated at a pressure greater than 90 psi (0.6 MPa), then a regulator must be used. The regulator may be located anywhere up-line of the lubricator in the air supply to the hoist.

3.3 Lubrication

- 3.3.1 **CAUTION** The hoist must be supplied with its own lubricator. The lubricator must be located as follows:
- 1) **Best location** - At the hoist inlet. In this case the lubricator can be either the mist type or drop type.
 - 2) **Second best location** - No more than 15 feet (4.5 meters) away from the hoist, at the same elevation or above the hoist inlet. In this case the mist type lubricator must be used.
 - 3) **Third best location** - No more than 15 feet (4.5 meters) away below the hoist. In this case the mist type lubricator must be used.
- 3.3.2 **CAUTION** The lubricator must be set to deliver the equivalent of 10 to 15 drops of oil per minute (0.2 to 0.3 cc/minute). The hoist's exhaust will emit a fine oil mist when properly lubricated. Refer to Section 6.1 for type of oil to use.

3.4 Filtration

3.4.1 **CAUTION** The air entering the hoist inlet must not contain any particulate greater than 5 microns in size. Therefore, the hoist must have a 5 micron filter in its air supply. The filter must be upstream of the lubricator.

3.4.2 The filter servicing the hoist can also service other hoists and air consuming equipment. In this case, the air filter must be in sized for the total air consumption of the equipment it is servicing.

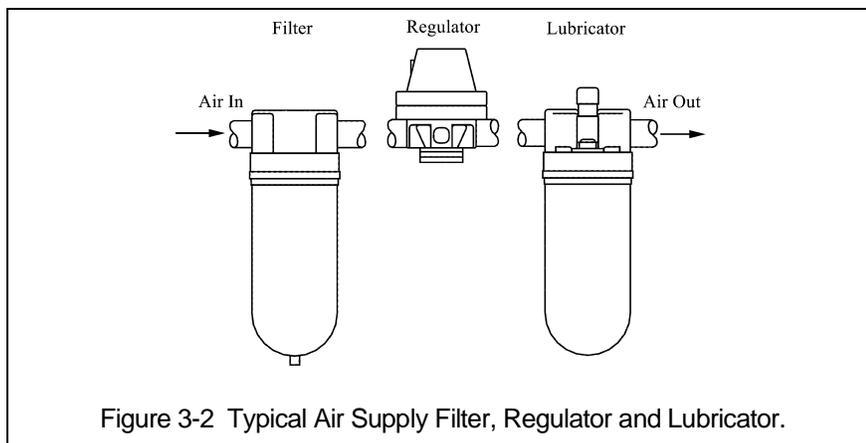

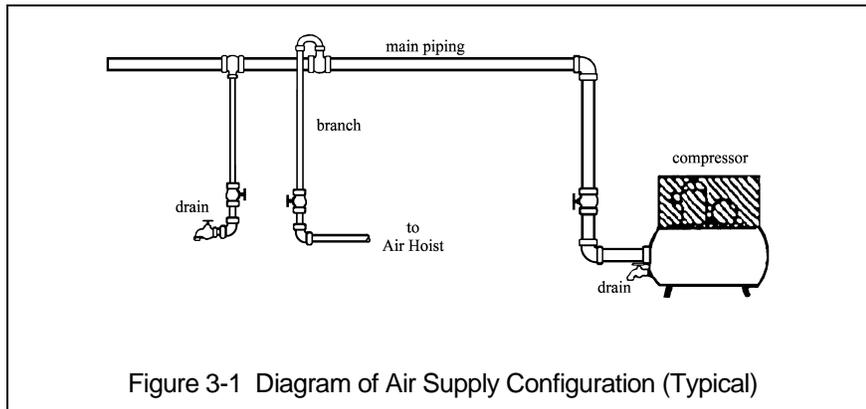

3.5 Air Dryer

3.5.1 **CAUTION** To prevent corrosion and hoist malfunction, employ an air dryer in the air supply system to ensure that dry air is supplied to the hoist. If there is moisture in the air supplied to the hoist, this moisture will cause corrosion on internal hoist components during periods when the hoist is idle leading to hoist malfunction.

3.6 Piping, Hoses And Fittings

3.6.1 **CAUTION** System Configuration - The system should be configured as shown in Figure 3-1. Since moisture tends to accumulate in compressed air systems, corrosion may result if the system is not periodically drained.

- Arrange for a drain in the air supply piping at the lowest point in the piping, and
- Periodically drain the system to remove moisture/water from the system and to prevent corrosion.
- Filter, regulator (if equipped), and lubricator must be arranged in the order shown in Figure 3-2.

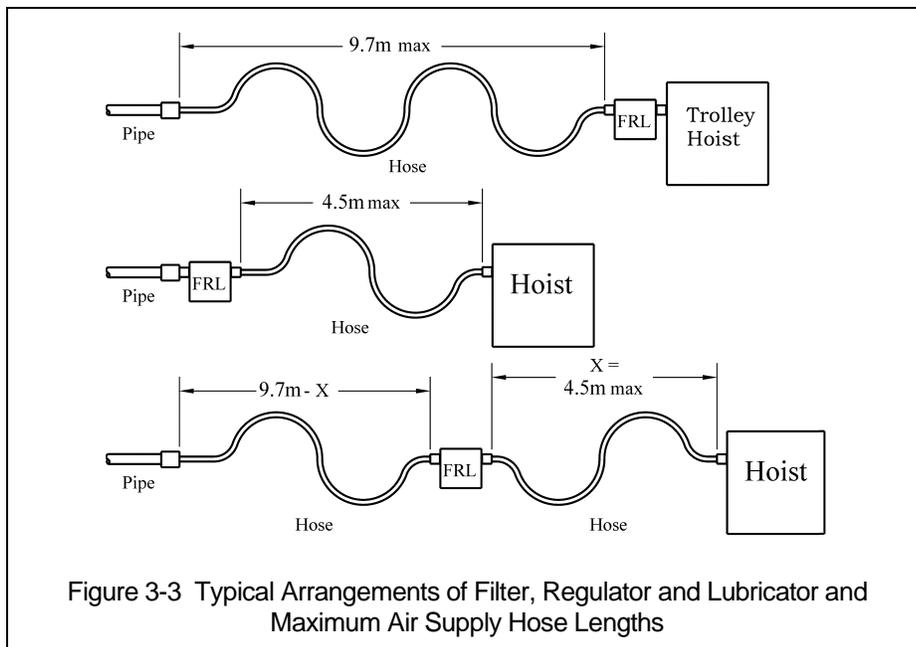

3.6.2 **NOTICE** Supply line inside diameter - Pipes and hoses should be sized to accommodate the hoist's airflow requirements. The inside diameter for the pipe section feeding the hoist should be 12.7mm (½") or larger and for air supply hose the inside diameter should be 9.5mm (3/8") inch or larger.

3.6.3 **NOTICE** Hoses - The connection from the air supply system piping to the hoist must be made with a flexible pressure hose. Due to normal line losses in air supply lines:

- Do not use hose smaller than specified in Section 3.6.2, and
- Limit the length of the hose to that specified in Figure 3-3.

If your application exceeds these requirements consult factory.

3.6.4 **CAUTION** Fittings - Important considerations regarding fittings in the hoist's air supply include:

- When connecting air supply components, remove all dirt or debris from the connecting surfaces of the hoses, pipes, fittings, or threaded fasteners to prevent contaminants from entering the hoist.
- Keep airflow restrictions such as quick disconnect fittings, bends, elbows, and adapters to a minimum.

3.6.5 **CAUTION** Before connecting the hoist to its air supply line, perform the proper draining and purging procedures to prevent contaminants or moisture from entering the hoist.

3.7 Mounting Location

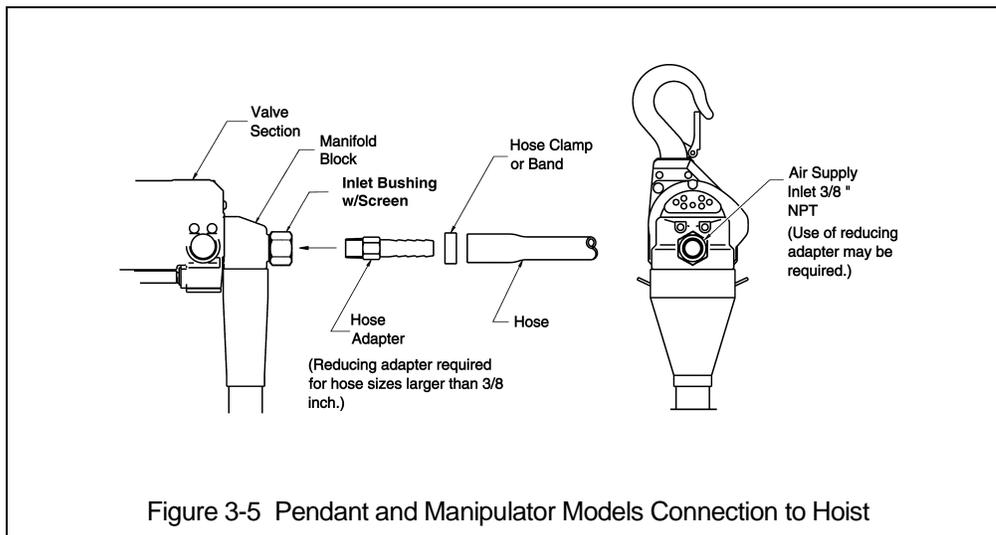

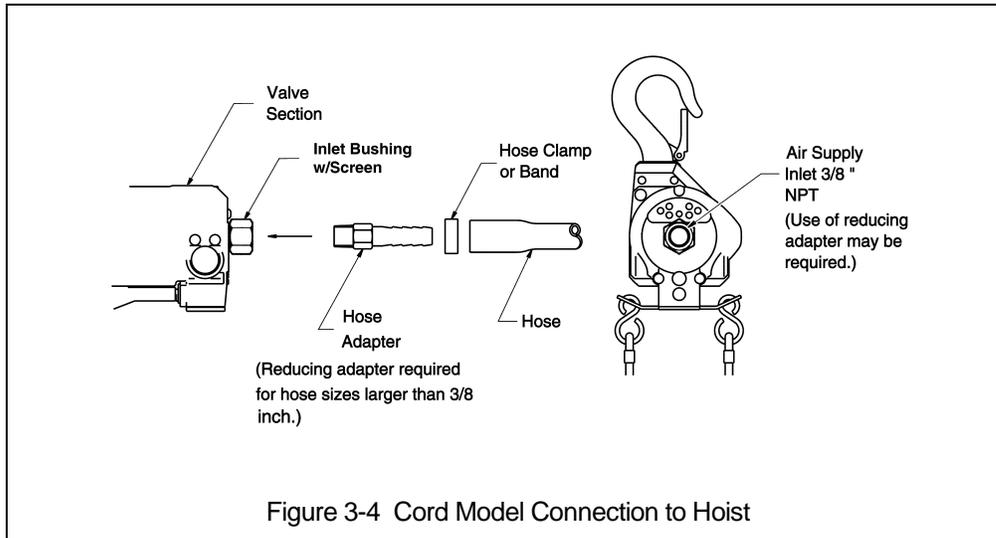

3.7.1 **WARNING** Prior to mounting the hoist ensure that the suspension and its supporting structure are adequate to support the hoist and its loads. If necessary consult a professional that is qualified to evaluate the adequacy of the suspension location and its supporting structure.

3.7.2 **NOTICE** See Section 7.6 for outdoor installation considerations.

3.8 Connecting Hoist to Air Supply

3.8.1 **⚠ WARNING** HAZARDOUS AIR PRESSURE IS PRESENT IN THE HOIST, IN THE SUPPLY OF COMPRESSED AIR TO THE HOIST, AND IN THE CONNECTIONS BETWEEN COMPONENTS.

3.8.2 Shut off the air supply and stop the airflow completely. Lock out and tag out in accordance with ANSI Z244.1 "Personnel Protection -Lockout/Tagout of Energy Sources".

3.8.3 **⚠ CAUTION** Before connecting the air supply hose to the hoist, always purge the air hose to clear any debris and water.

3.8.4 Apply approximately 10-15 drops (0.2 to 0.3 cc/minute) of turbine oil (see approved lubricant under Section 6.0 Lubricants) into the hose before attaching to the hoist.

3.8.5 Make connections to air supply; reference Figure 3-4 or 3-5. Use a reducing adapter at the hoist valve section for hose sizes larger than 9.5mm (3/8").

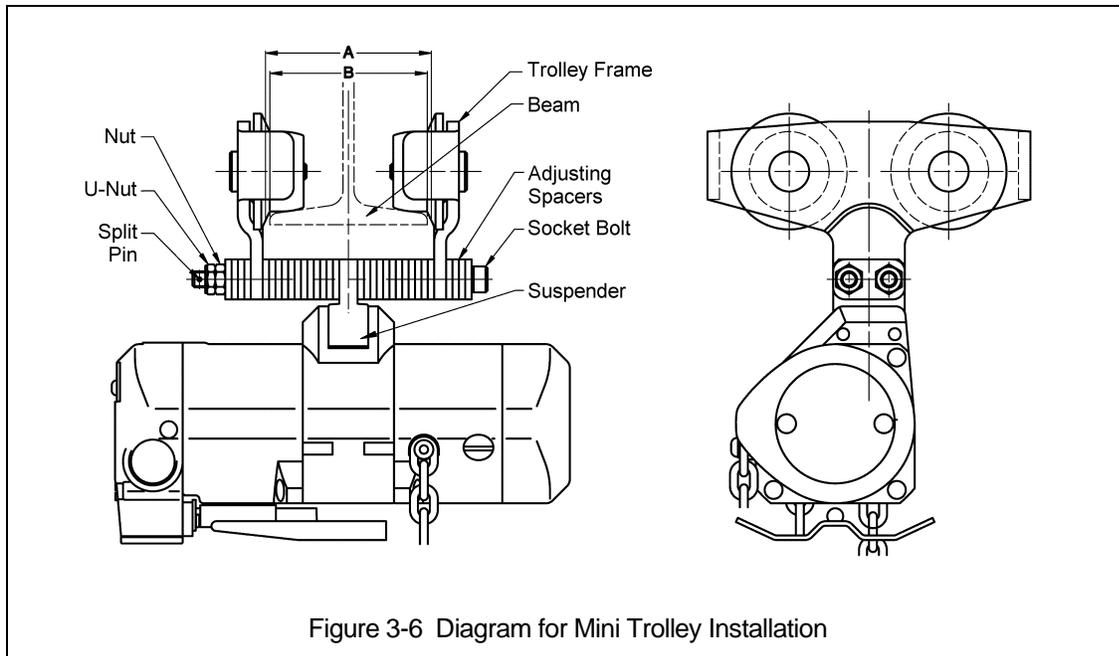

3.8.6 **NOTICE** Where conditions dictate, the installation sequence can be reversed by mounting the hoist first (Section 3.9) followed by connecting the air supply.

3.9 Mounting the Hoist

3.9.1 Mini Trolley - Follow instructions below to install the trolley. Refer to Figure 3-6.

- 1) Remove the Top Hook Complete Set from the hoist and install the Suspender.
- 2) Refer to Table 3-1 for placement of Adjusting Spacers for the flange width "B" of the traversing beam. The position of spacers differs with flange width. If the beam flange width is not listed in Table 3-1, use the next size smaller and make adjustments in accordance with step 3. Use all 32 adjusting spacers provided.
- 3) Refer to Figure 3-6 and assemble the trolley Frames, Adjusting Spacers and Socket Bolts onto the Suspender. Install and hand tighten the plain Nuts on the Socket Bolts. Verify that dimension "A" is approximately 0.12 - 0.16 in (3-4mm) greater than "B" (flange width). If "A" does not fall within the specified range, move spacers from inner to outer or from outer to inner as necessary to obtain the proper "A" dimension, irrespective of the numbers in Table 3-1.
- 4) Install the trolley and hoist onto traversing beam using one of the following 2 methods:
 - Preferred Method – Sliding the trolley connected with hoist onto the traversing beam from the beam end is the most convenient and recommended method. If the trolley can be mounted from the end of the beam then: Remove the trolley end-stop from the beam and set the trolley on the beam from the end. Securely re-install the trolley end stop on the beam.
 - Optional Method – If the trolley cannot be mounted from the end of the beam, loosen the plain Nuts and spread the trolley Frames. Lift the trolley and hoist onto the beam from below. Push the trolley frames together and hand tighten the plain Nuts.
- 5) Check for contact between all four trolley wheels and the rail surface. Shift the Trolley Frame until all trolley wheels rest on the rail surface. Tighten the plain Nuts and install the two U-Nuts onto the Socket Bolts tighten against the plain Nuts. Install the Split Pins onto the Socket Bolts and bend securely.
- 6) **⚠ WARNING** Incorrect number of adjusting spacers may cause the trolley to not move or to drop. To avoid these hazards, always make sure to use all 32 spacers and confirm that A - B = 0.12 - 0.16 in (3-4mm).
- 7) **⚠ WARNING** To prevent the trolley from dropping, firmly fasten the Socket Bolt, Nut and U-Nut. Insert split pin and bend the ends 90 degrees or more.

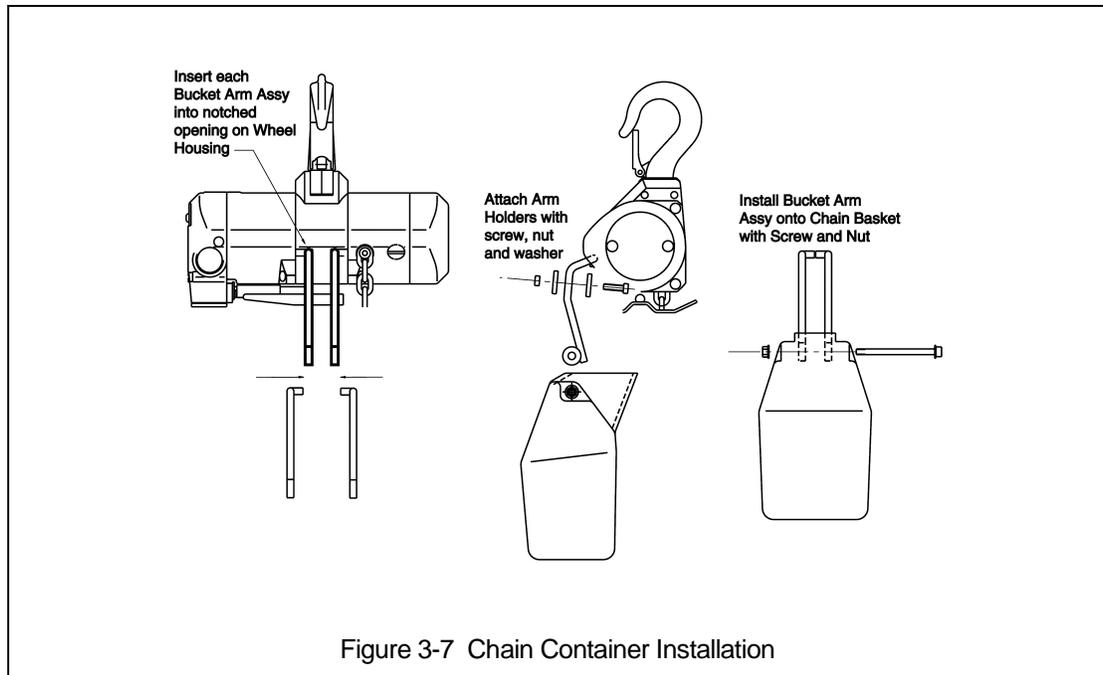

Rail Width mm (in)	Outside left frame	Inside left frame	Inside right frame	Outside right frame
50.8 (2)	8	8	6	8
58.7 (2 5/16)	6	9	8	7
63.5 (2 1/2)	6	10	8	6
68.3 (2 11/16)	5	10	9	6
71.4 (2 13/16)	5	11	9	5
76.2 (3)	4	12	10	4
82.6 (3 1/4)	3	13	11	3
84.1 (3 5/16)	3	13	11	3
90.5 (3 9/16)	2	14	12	2
93.7 (3 11/16)	1	14	13	2
98.4 (3 7/8)	0	15	14	1
100 (3 15/16)	0	16	14	0

- 3.9.2 Manual Trolley - Follow instructions in Owner's Manual provided with the trolley.
- 3.9.3 Motorized Trolley - Follow instructions in Owner's Manual provided with the trolley.
- 3.9.4 Hook Mounted to a Fixed Location - Attach the hoist's top hook to the fixed suspension point.
- 3.9.5 **⚠ WARNING** Ensure that the fixed suspension point rests on the center of the hook's saddle and that the hook's latch is engaged.

3.10 Optional Chain Container

- 3.10.1 Follow instructions below to install the optional chain container. Refer to Figure 3-7.
 - 1) Insert the Bucket Arm Assembly into the notched openings on the Wheel Housing.
 - 2) Loosely attach the Arm Holders to the Bucket Arm Assembly with the Bolt, Washers and U-Nut provided.
 - 3) Attach the Chain Container onto the Bucket Arm Assembly with the Socket Bolt BP, U-Nut and Split Pin. Make Sure to Securely bent the Split Pin.
 - 4) Tighten the Bolt and U-Nut on the Arm Holders.
 - 5) Feed the Chain into the Chain Container beginning with the no-load end. Take care to avoid twisting or tangling the Chain.
 - 6) **⚠ CAUTION** Do not use the Chain Container if any parts are damaged or if any fasteners/hardware are missing.

3.11 Non-Stationary Application

- 3.11.1 For applications such as rental fleets or construction sites where the hoist is moved from place-to-place, a filter and lubricator are still required. Consult factory for recommended methods.
- 3.11.2 Connections and fittings must be kept clean and care taken to prevent dirt, debris and moisture from entering the hoist.
- 3.11.3 Recommended practice for removing the hoist from an installation:
 - 1) Run the hoist briefly with well lubricated air
 - 2) Shut off the air supply to the hoist, bleed off any pressure in the system then disconnect the air supply line.
 - 3) Inject a small quantity (approximately 20 drops) of turbine oil (see Section 6.0) into the hoist's inlet port
 - 4) Plug the inlet port

3.12 Manipulator Right or Left Hand Operation

3.12.1 Follow instructions below to configure for right or left-hand operation. Refer to Figure 3-8.

- 1) **⚠ WARNING** HAZARDOUS AIR PRESSURE IS PRESENT IN THE HOIST, IN THE SUPPLY OF COMPRESSED AIR TO THE HOIST, AND IN THE CONNECTIONS BETWEEN COMPONENTS. Shut off the air supply and stop the airflow completely. Bleed off any pressure in the system. Lock out and tag out in accordance with ANSI Z244.1 "Personnel Protection - Lockout/Tagout of Energy Sources".
- 2) Remove the 6 Button Head Screws located on the back side of the Manipulator control then remove the Throttle Valve Complete.
- 3) Make sure the 8 O-Rings and 2 Spring Pins are correctly positioned, then rotate the Throttle Valve Complete 180 degrees and re-install.
- 4) Re-install and tighten the 6 Button Head Screws
- 5) Re-connect or turn on the air supply and check for leaks and proper operation.

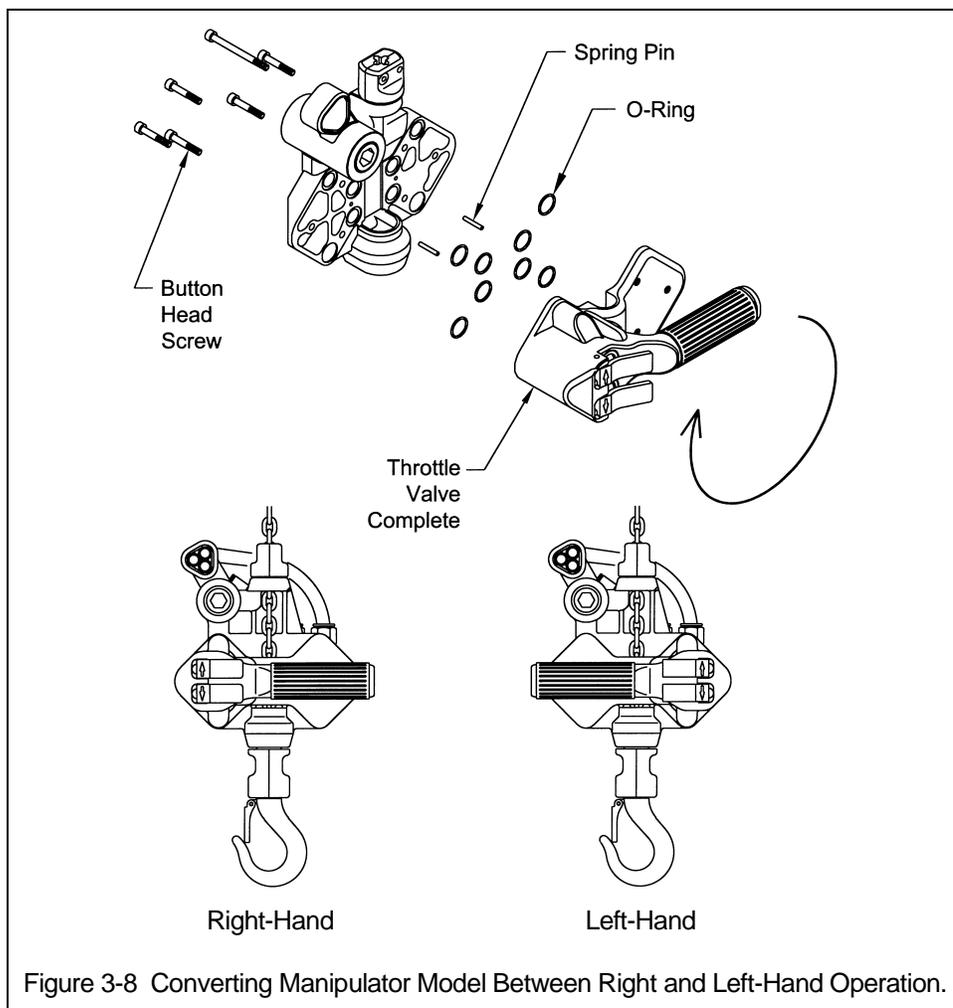

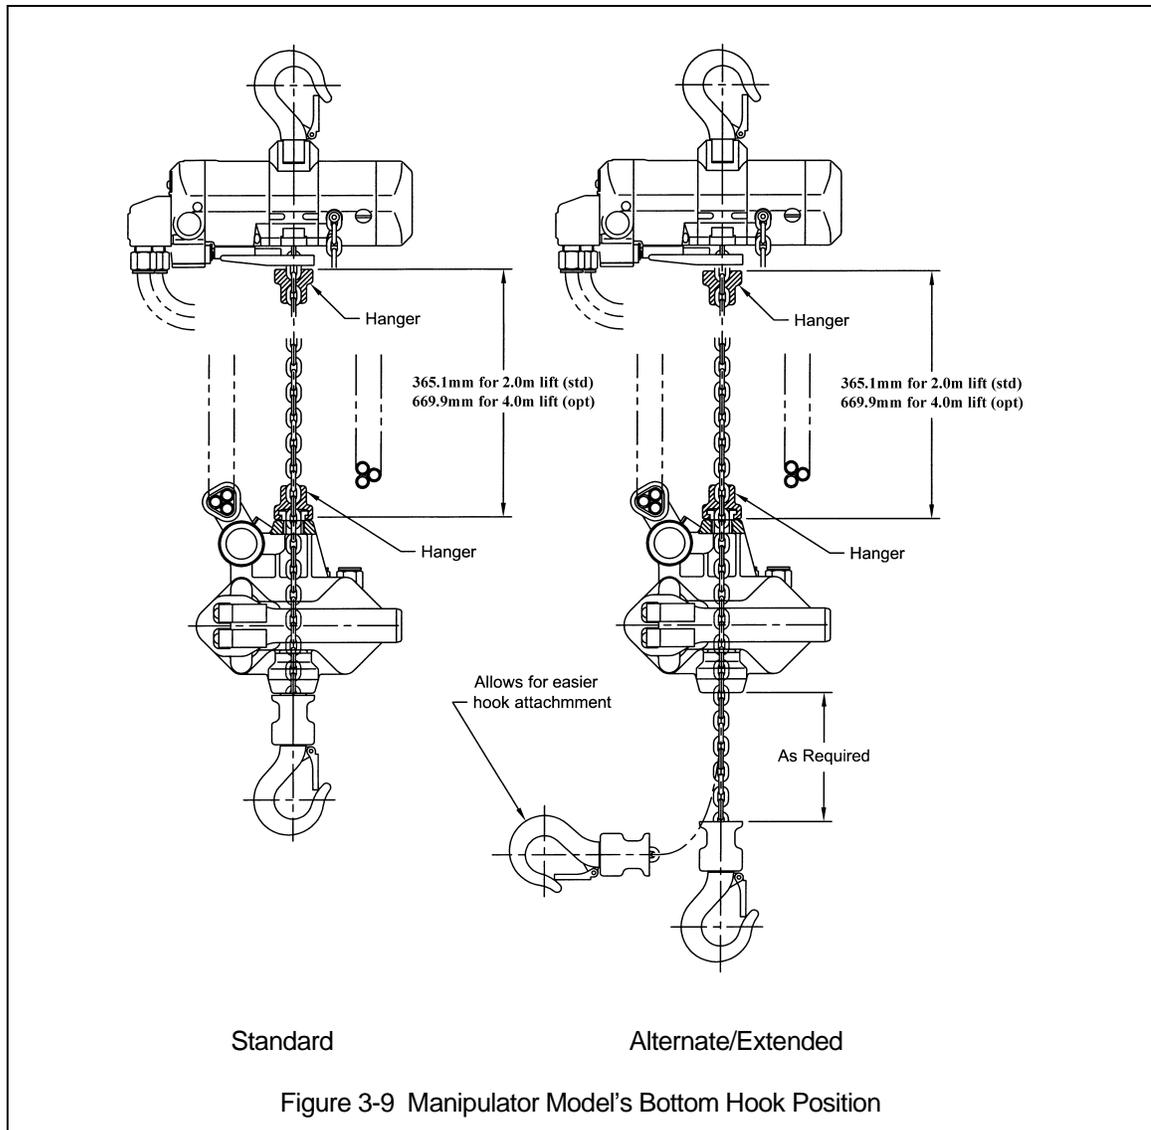

Figure 3-8 Converting Manipulator Model Between Right and Left-Hand Operation.

3.13 Manipulator Model's Bottom Hook Position

3.13.1 The Bottom Hook can be extended below the manipulator control to allow for easier load attachment and operation as required by the application. Follow instructions below. Refer to Figure 3-9.

- 1) Run the hoist in the down direction until there is a sufficient amount of Load Chain below the hoist.
- 2) **⚠️ WARNING** HAZARDOUS AIR PRESSURE IS PRESENT IN THE HOIST, IN THE SUPPLY OF COMPRESSED AIR TO THE HOIST, AND IN THE CONNECTIONS BETWEEN COMPONENTS. Shut off the air supply and stop the airflow completely. Bleed off any pressure in the system. Lock out and tag out in accordance with ANSI Z244.1 "Personnel Protection - Lockout/Tagout of Energy Sources".
- 3) Remove both Hangers from the Load Chain.
- 4) Slide the Manipulator Control up the Load Chain to the desired position then reinstall the bottom Hanger onto the Load Chain.
- 5) Refer to the minimum dimensions between the hangers shown in Figure 3-9. Measure up from the bottom Hanger and reinstall the top Hanger onto the Load Chain.

3.14 Preoperation Checks and Trial Operation

- 3.14.1 **⚠ WARNING** Confirm the adequacy of the rated capacity for all slings, chains, wire ropes and all other lifting attachments before use. Inspect all load suspension members for damage prior to use and replace or repair all damaged parts.

- 3.14.2 **⚠ WARNING** Verify that the no-load end of the load chain is attached to the hoist body. For reference see Figure 7-3.

- 3.14.3 Measure and record the “K” and “U” dimensions for the top and bottom hooks. See Table 5-6 under Section 5, “Inspection”.

- 3.14.4 Record the hoist Code and Serial Number (from the name plate on the hoist – see Figure 10-1) in the space provided on the cover of this manual.

- 3.14.5 Ensure that the hoist is properly installed to either a fixed point, or trolley, whichever applies.

- 3.14.6 If hoist is installed on a trolley, ensure that
- trolley is properly installed on the beam, and
 - stops for the trolley are correctly positioned and securely installed on the beam.
- 3.14.7 Ensure that all nuts, bolts and split (cotter) pins are sufficiently fastened.
- 3.14.8 For Pendant model hoists, ensure that the Pendant Hoses/Tubes are properly attached to the hoist and Pendant Valve CP. See Section 7.3.
- 3.14.9 For Manipulator model hoists, ensure that the Coil Hose is properly attached to the hoist and Manipulator Control. See Section 7.3.
- 3.14.10 **⚠ CAUTION** Check Air Supply - Check air supply before everyday use. Ensure proper air quality and air pressure.
- 3.14.11 **⚠ CAUTION** Check the lubricator for proper function and adequate oil level.
- 3.14.12 Confirm proper operation.
- Before operating read and become familiar with Section 4 - Operation.
 - Before operating ensure that the hoist (and trolley) meets the Inspection, Testing and Maintenance requirements of ANSI/ASME B30.16.
 - Before operating ensure that nothing will interfere with the full range of the hoist's (and trolley's) operation.
- 3.14.13 Proceed with trial operation to confirm proper operation.
- **⚠ CAUTION** Make sure hook travel is in the same direction as shown on controls.
 - Initially operate slowly under no load in both directions.
 - Perform inspections per Section 5.3, "Frequent Inspections".

4.0 Operation

4.1 Introduction

DANGER

DO **NOT** WALK UNDER A SUSPENDED LOAD

WARNING

HOIST OPERATORS SHALL BE REQUIRED TO READ THE OPERATION SECTION OF THIS MANUAL, THE WARNINGS CONTAINED IN THIS MANUAL, INSTRUCTION AND WARNING LABELS ON THE HOIST OR LIFTING SYSTEM, AND THE OPERATION SECTIONS OF ANSI/ASME B30.16 and ANSI/ASME B30.10. THE OPERATOR SHALL ALSO BE REQUIRED TO BE FAMILIAR WITH THE HOIST AND HOIST CONTROLS BEFORE BEING AUTHORIZED TO OPERATE THE HOIST OR LIFTING SYSTEM.

HOIST OPERATORS SHOULD BE TRAINED IN PROPER RIGGING PROCEDURES FOR THE ATTACHMENT OF LOADS TO THE HOIST HOOK.

HOIST OPERATORS SHOULD BE TRAINED TO BE AWARE OF POTENTIAL MALFUNCTIONS OF THE EQUIPMENT THAT REQUIRE ADJUSTMENT OR REPAIR, AND TO BE INSTRUCTED TO STOP OPERATION IF SUCH MALFUNCTIONS OCCUR, AND TO IMMEDIATELY ADVISE THEIR SUPERVISOR SO CORRECTIVE ACTION CAN BE TAKEN.

HOIST OPERATORS SHOULD HAVE NORMAL DEPTH PERCEPTION, FIELD OF VISION, REACTION TIME, MANUAL DEXTERITY, AND COORDINATION.

HOIST OPERATORS SHOULD **NOT** HAVE A HISTORY OF OR BE PRONE TO SEIZURES, LOSS OF PHYSICAL CONTROL, PHYSICAL DEFECTS, OR EMOTIONAL INSTABILITY THAT COULD RESULT IN ACTIONS OF THE OPERATOR BEING A HAZARD TO THE OPERATOR OR TO OTHERS.

HOIST OPERATORS SHOULD **NOT** OPERATE A HOIST OR LIFTING SYSTEM WHEN UNDER THE INFLUENCE OF ALCOHOL, DRUGS, OR MEDICATION.

OVERHEAD HOISTS ARE INTENDED ONLY FOR VERTICAL LIFTING SERVICE OF FREELY SUSPENDED UNGUIDED LOADS. DO **NOT** USE HOIST FOR LOADS THAT ARE NOT LIFTED VERTICALLY, LOADS THAT ARE NOT FREELY SUSPENDED, OR LOADS THAT ARE GUIDED.

NOTICE

- Read ANSI/ASME B30.16 and ANSI/ASME B30.10.
- Read the hoist manufacturer's Operating and Maintenance Instructions.
- Read all labels attached to equipment.

The operation of an overhead hoist involves more than activating the hoist's controls. Per the ANSI/ASME B30 standards, the use of an overhead hoist is subject to certain hazards that cannot be mitigated by engineered features, but only by the exercise of intelligence, care, common sense, and experience in anticipating the effects and results of activating the hoist's controls. Use this guidance in conjunction with other warnings, cautions, and notices in this manual to govern the operation and use of your overhead hoist.

4.2 Shall's and Shall Not's for Operation

WARNING

Improper operation of a hoist can create a potentially hazardous situation which, if not avoided, could result in death or serious injury, and substantial property damage. To avoid such a potentially hazardous situation **THE OPERATOR SHALL:**

- **NOT** lift more than rated load for the hoist.
- **NOT** operate unless load is centered under hoist.
- **NOT** use damaged hoist or hoist that is not working properly.
- **NOT** use hoist with twisted, kinked, damaged, or worn chain.
- **NOT** use the hoist to lift, support, or transport people.
- **NOT** lift loads over people.
- **NOT** apply load unless load chain is properly seated in the load sheave.
- **NOT** use the hoist in such a way that could result in shock or impact loads being applied to the hoist.
- **NOT** attempt to lengthen the load chain or repair damaged load chain.
- **NOT** operate hoist when it is restricted from forming a straight line from hook to hook in the direction of loading.
- **NOT** use load chain as a sling or wrap load chain around load.
- **NOT** apply the load to the tip of the hook or to the hook latch.
- **NOT** apply load if binding prevents equal loading on all load supporting chains.
- **NOT** operate beyond the limits of the load chain travel.
- **NOT** operate hoist with missing/damaged chain components.
- **NOT** leave load supported by the hoist unattended unless specific precautions have been taken.
- **NOT** allow the chain, or hook to be used as an electrical or welding ground.
- **NOT** allow the chain, or hook to be touched by a live welding electrode.
- **NOT** remove or obscure the warnings on the hoist.
- Be familiar with operating controls, procedures, and warnings.
- Make sure the unit is securely attached to a suitable support before applying load.
- Make sure load slings or other approved single attachments are properly sized, rigged, and seated in the hook saddle.
- Take up slack carefully - make sure load is balanced and load-holding action is secure before continuing.
- Make sure all persons stay clear of the supported load.
- Protect the hoist's load chain from weld splatter or other damaging contaminants.
- Report Malfunctions or unusual performances (including unusual noises) of the hoist and remove the hoist from service until the malfunction or unusual performance is resolved.
- Make sure hoist limit switches function properly.
- Warn personnel before lifting or moving a load.
- Warn personnel of an approaching load.

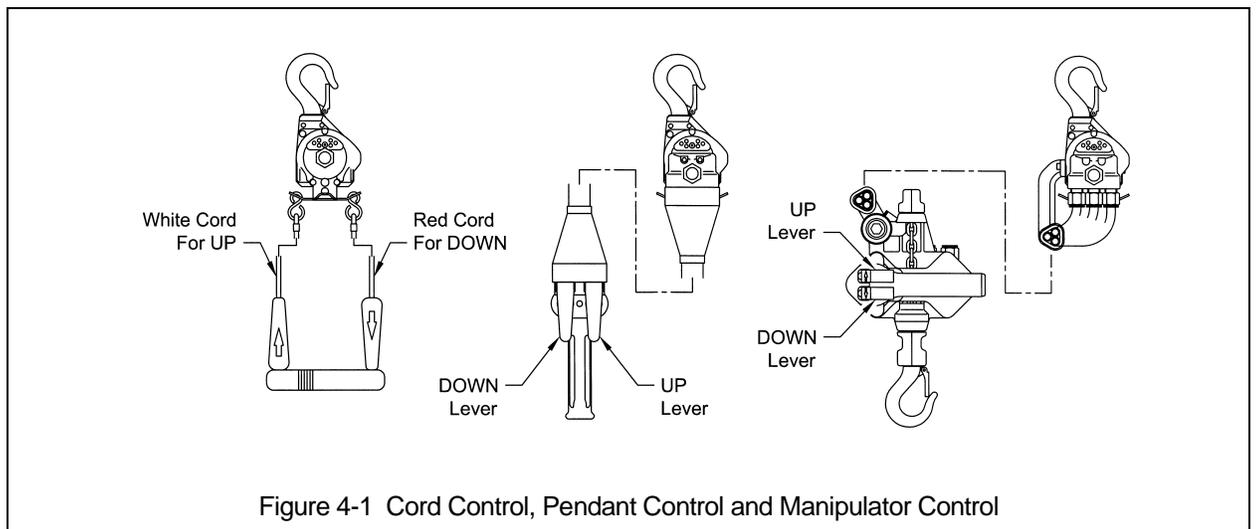

⚠ CAUTION

Improper operation of a hoist can create a potentially hazardous situation which, if not avoided, could result in minor or moderate injury, or property damage. To avoid such a potentially hazardous situation **THE OPERATOR SHALL:**

- Maintain a firm footing or be otherwise secured when operating the hoist.
- Check brake function by tensioning the hoist prior to each lift operation.
- Use hook latches. Latches are to retain slings, chains, etc. under slack conditions only.
- Make sure the hook latches are closed and not supporting any parts of the load.
- Make sure the load is free to move and will clear all obstructions.
- Avoid swinging the load or hook.
- Make sure hook travel is in the same direction as shown on controls.
- Inspect the hoist regularly, replace damaged or worn parts, and keep appropriate records of maintenance.
- Use the hoist manufacturer's recommended parts when repairing the unit.
- Lubricate load chain per hoist manufacturer's recommendations.
- **NOT** use limit switches as routine operating stops. They are emergency devices only.
- **NOT** allow your attention to be diverted from operating the hoist.
- **NOT** allow the hoist to be subjected to sharp contact with other hoists, structures, or objects through misuse.
- **NOT** adjust or repair the hoist unless qualified to perform such adjustments or repairs.

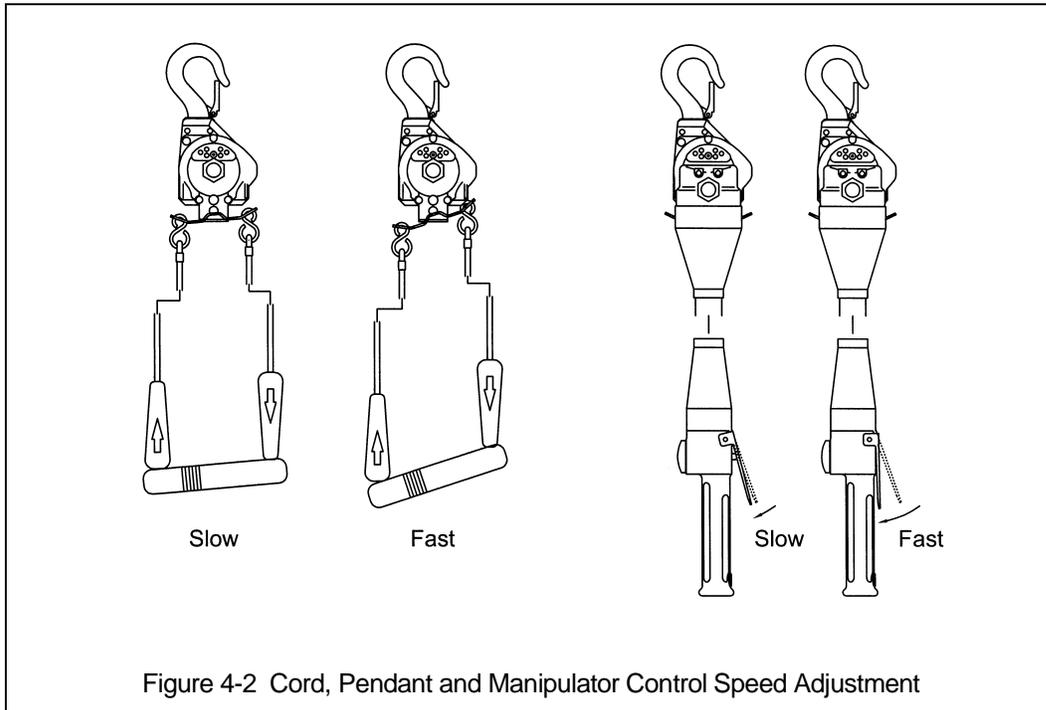

4.3 Hoist Controls

- 4.3.1 Cord Control - When using a hoist with cord control, pull down on the appropriate colored cord to raise or lower the load. White indicates the raise control and red indicates lowering control. Release the cords to stop the hoist. Refer to Figure 4-1 below.
- 4.3.2 Pendant and Manipulator Controls – When using a hoist with pendant or manipulator control, depress the “up” lever to raise the load or the “down” lever to lower the load as shown in Figure 4-1 below. To stop motion release the levers.

4.4 Controlling Hoist Speed

4.4.1 For the cord control, adjust the speed by varying the amount of pull on the cord. Refer to Figure 4-2.

4.4.2 For the pendant or manipulator control, adjust the speed by varying the amount the lever is depressed. As shown in Figure 4-2, by depressing the lever slightly, you will be able to control the hoist's motions slowly and with more precision. By the depressing the lever further, the speed of the hoist will be increased until the lever is fully depressed.

5.0 Inspection

5.1 General

- 5.1.1 The inspection procedure herein is based on ANSI/ASME B30.16. The following definitions are from ANSI/ASME B30.16 and pertain to the inspection procedure below.
- **Designated Person** - a person selected or assigned as being competent to perform the specific duties to which he/she is assigned.
 - **Qualified Person** - a person who, by possession of a recognized degree or certificate of professional standing, or who, by extensive knowledge, training, and experience, has successfully demonstrated the ability to solve or resolve problems relating to the subject matter and work.
 - **Normal Service** - that distributed service which involves operation with randomly distributed loads within the rated load limit, or uniform loads less than 65% of rated load for not more than 25% of the time.
 - **Heavy Service** - that service which involves operation within the rated load limit which exceeds normal service.
 - **Severe Service** - that service which involves normal or heavy service with abnormal operating conditions.

5.2 Inspection Classification

- 5.2.1 Initial Inspection - prior to initial use, all new, altered, or modified hoists shall be inspected by a designated person to ensure compliance with the applicable provisions of this manual.
- 5.2.2 Inspection Classification - the inspection procedure for hoists in regular service is divided into two general classifications based upon the intervals at which inspection should be performed. The intervals in turn are dependent upon the nature of the critical components of the hoist and the degree of their exposure to wear, deterioration, or malfunction. The two general classifications are herein designated as FREQUENT and PERIODIC, with respective intervals between inspections as defined below.
- 5.2.3 FREQUENT Inspection - visual examinations by the operator or other designated personnel with intervals per the following criteria:
- Normal service - monthly
 - Heavy service - weekly to monthly
 - Severe service - daily to weekly
 - Special or infrequent service - as recommended by a qualified person before and after each occurrence.
- 5.2.4 PERIODIC Inspection - visual inspection by a designated person with intervals per the following criteria:
- Normal service - yearly
 - Heavy service - semiannually
 - Severe service - quarterly
 - Special or infrequent service - as recommended by a qualified person before the first such occurrence and as directed by the qualified person for any subsequent occurrences.

5.3 Frequent Inspection

- 5.3.1 Inspections should be made on a FREQUENT basis in accordance with Table 5-1, "Frequent Inspection." Included in these FREQUENT Inspections are observations made during operation for any defects or damage that might appear between Periodic Inspections. Evaluation and resolution of the results of FREQUENT Inspections shall be made by a designated person such that the hoist is maintained in safe working condition.

Table 5-1 Frequent Inspection
All functional operating mechanisms for maladjustment and unusual sounds.
Operation of limit switch and associated components
Hoist braking system for proper operation
Hooks in accordance with ANSI/ASME B30.10
Hook latch operation
Load chain in accordance with Section 5.7
Air valves and components for leakage or damage

5.4 Periodic Inspection

- 5.4.1 Inspections should be made on a PERIODIC basis in accordance with Table 5-2, "Periodic Inspection." Evaluation and resolution of the results of PERIODIC Inspections shall be made by a designated person such that the hoist is maintained in safe working condition.
- 5.4.2 For inspections where load suspension parts of the hoist are disassembled, a load test per ANSI/ASME B30.16 must be performed on the hoist after it is re-assembled and prior to its return to service.

Table 5-2 Periodic Inspection
Requirements of frequent inspection.
Evidence of loose bolts, nuts, or rivets.
Evidence of worn, corroded, cracked, or distorted parts such as load blocks, suspension housing, chain attachments, clevises, yokes, suspension bolts, shafts, gears, bearings and pins.
Evidence of damage to hook retaining nuts or collars and pins, and welds or rivets used to secure the retaining members.
Evidence of damage or excessive wear of load sheaves.
Evidence of excessive wear on motor vanes or on load brake.
Evidence of damage of supporting structure or trolley, if used.
Function labels on pendant control stations for legibility.
Warning label properly attached to the hoist and legible (see Section 1.2).
End connections of load chain.

5.5 Occasionally Used Hoists

5.5.1 Hoists that are used infrequently shall be inspected as follows prior to placing in service:

- Hoist Idle More Than 1 Month, Less Than 1 Year: Inspect per FREQUENT Inspection criteria of Section 5.3 above.
- Hoist Idle More Than 1 Year: Inspect per PERIODIC Inspection criteria of Section 5.4 above.

5.6 Inspection Records

5.6.1 Dated inspection reports and records should be maintained at time intervals corresponding to those that apply for the hoist's PERIODIC interval per Section 5.4 above. These records should be stored where they are available to personnel involved with the inspection, maintenance, or operation of the hoist.

5.6.2 A long range chain inspection program should be established and should include records of examination of chains removed from service so a relationship can be established between visual observation and actual condition of the chain.

5.7 Inspection Methods and Criteria

5.7.1 This section covers the inspection of specific items. The list of items in this section is based on those listed in ANSI/ASME B30.16 for the Frequent and Periodic Inspection. In accordance with ANSI/ASME B30.16, these inspections are not intended to involve disassembly of the hoist. Rather, disassembly for further inspection would be required if frequent or periodic inspection results so indicate. Such disassembly and further inspection should only be performed by a qualified person trained in the disassembly and re-assembly of the hoist.

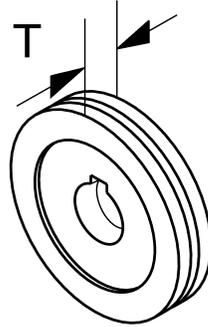

Item	Method	Criteria	Action
Functional operating mechanisms.	Visual, Auditory	Mechanisms should be properly adjusted and should not produce unusual sounds when operated.	Repair or replace as required.
Limit Switch	Function	Proper operation. Actuation of limit switch should stop hoist.	Repair or replace as required.
Chain Lever Assembly	Visual, Function	Lever should not be bent or significantly worn and should be able to move freely.	Replace.
Braking System	Function	Braking distance should not exceed approximately five chain links.	Repair or replace as required.
Hooks - Surface Condition	Visual	Should be free of significant rust, weld splatter, deep nicks, or gouges.	Replace.
Hooks - Fretting wear	Measure	The "U" dimension should not be less than minimum value for discard from Table 5-6 (See Section 3.14)	Replace.
Hooks - Stretch	Measure	The "K" dimension should not exceed the maximum value for discard from Table 5-6 (See Section 3.14)	Replace.

Table 5-3 Hoist Inspection Methods and Criteria

Item	Method	Criteria	Action
Hooks - Bent Shank or Neck	Visual	Shank and neck portions of hook should be free of deformations	Replace.
Hooks - Yoke Assembly	Visual	Should be free of significant rust, weld splatter, nicks, gouges. Holes should not be elongated, fasteners should not be loose, and there should be no gap between mating parts.	Clean/Lubricate, or replace as required.
Hooks - Swivel Bearing	Visual, Function	Bearing parts and surfaces should not show significant wear, and should be free of dirt, grime and deformations. Hook should rotate freely with no roughness.	Clean/lubricate, or replace as required.
Hooks - Hook Latches	Visual, Function	Latch should not be deformed. Attachment of latch to hook should not be loose. Latch spring should not be missing and should not be weak. Latch movement should not be stiff - when depressed and released latch should snap smartly to its closed position.	Replace.
Load Chain - Surface Condition	Visual	Should be free of rust, nicks, gouges, dents and weld splatter. Links should not be deformed, and should not show signs of abrasion. Surfaces where links bear on one another should be free of significant wear.	Replace.
Load Chain - Pitch and Wire Diameter	Measure	The "P" dimension should not be greater than maximum value listed in Table 5-8 . The "d" dimension should not be less than minimum value listed in Table 5-8 .	Replace, inspect Load Sheave.
Load Chain - Lubrication	Visual, Auditory	Entire surface of each chain link should be coated with lubricant and should be free of dirt and grime. Chain should not emit cracking noise when hoisting a load.	Clean/lubricate (see Section 6.0).
Load Chain - Reeving	Visual	Chain should be reeved properly through Load Sheave and properly attached to the hoist body - refer to Section 7.2 .	Install chain properly.
Chain Container (optional)	Visual	Container should not be damaged. Brackets should not be deformed or missing.	Replace
Bolts, Nuts and Rivets	Visual, Check with Proper Tool	Bolts, nuts and rivets should not be loose.	Tighten or replace as required.
Housing and Mechanical Components	Visual, Auditory, Vibration, Function	Hoist components including load blocks, suspension housing, chain attachments, clevises, yokes, suspension bolts, shafts, gears, bearings, pins and rollers should be free of cracks, distortion, significant wear and corrosion. Evidence of same can be detected visually or via detection of unusual sounds or vibration during operation.	Replace.

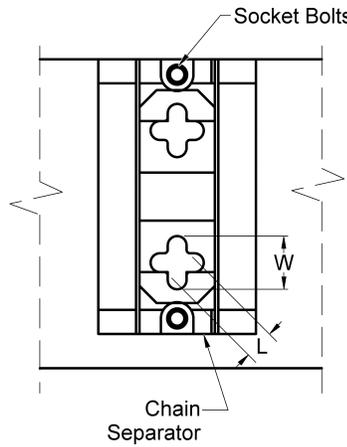

Table 5-3 Hoist Inspection Methods and Criteria			
Item	Method	Criteria	Action
Chain Separator	Visual, Measure	The Chain Separator should be free of cracks, distortion, significant wear and corrosion. The "L" and "W" dimension should not be greater than maximum value listed in Table 5-5 .	Replace
Motor Brake	Measure, Visual	Motor brake dimension should be within the allowable limits of Table 5-4 . See Section 7.1 for gaining access to motor brake. Braking surfaces should be clean, free of grease/oil and should not be glazed.	Replace
Load Sheave	Visual	Pockets of Load Sheave should be free of significant wear. See Section 7.4 to gain visual access to the load sheave.	Replace.
Pendant Control Switches	Visual, Function	Depressing and releasing pendant control buttons should cause hoist to operate.	Repair or replace as necessary.
Pendant - Housing	Visual	Pendant housing should be free of cracks and mating surfaces of parts should seal without gaps.	Replace.
Pendant - Tubing	Visual, auditory	Tubing to pendant control switches should not be loose or be leaking air.	Repair or replace as necessary.
Warning Labels	Visual	Warning Labels should be affixed to the hoist (see Section 1.2) and they should be legible.	Replace
Hoist Capacity Label	Visual	The label that indicates the capacity of the hoist should be legible and securely attached to the hoist.	Replace.

Table 5-4 Brake Disc Dimension

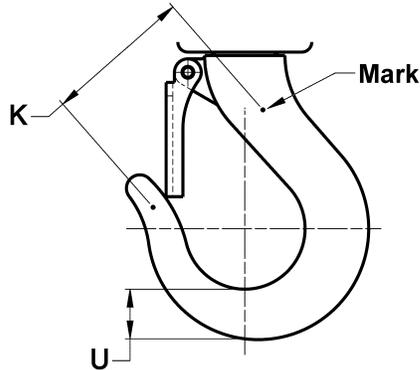

Hoists	Parts List Fig. No.	"T" Dimension inch (mm)	
		Standard	Discard
AH250C AH250P AH250M AH500C AH500P AH500M	72	0.31 (8)	0.29 (7.3)

Table 5-5 Chain Separator Dimensions

Hoists	Parts List Fig. No.	"L" Dimension inch (mm)		"W" Dimension inch (mm)	
		Standard	Discard	Standard	Discard
AH250C AH250P AH250M AH500C AH500P AH500M	92	0.33 (8.5)	0.41 (10.5)	0.61 (15.5)	0.69 (17.5)

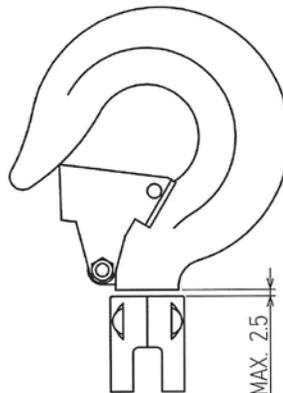

Table 5-6 Top Hook & Bottom Hook Dimensions

Dimensions K and U should be measured and recorded below prior to any use when the hook is first placed into service.

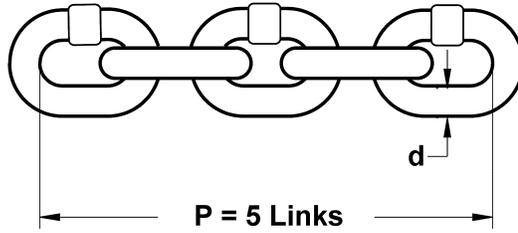

Hoists	Parts List Fig. No.	"K" Dimension inch (mm)		"U" Dimension inch (mm)	
		Recorded Dimension When New	Maximum /Minimum Value for Discard	Recorded Dimension When New	Maximum /Minimum Value for Discard
AH250C AH250P AH250M AH500C AH500P AH500M	140A	Top Hook K = _____	For K if the measured dimension exceeds K(new) + 0.5mm , the hook should be replaced.	Top Hook U = _____	For U if the measured dimension is less than U(new) - 1mm , the hook should be replaced.
	142A	Bottom Hook K = _____		Bottom Hook U = _____	

Table 5-7 Top Hook/Yoke Gap Wear Limit Dimension

Capacity Code	Parts List Fig. No.	Replacement Required if Measured Value Exceeds: Inch (mm)
All Capacities	140A	0.1 (2.5)

Table 5-8 Chain Dimensions

Hoists	"P" Dimension inch (mm)		"d" Dimension Wear Limit Inch (mm)	
	Standard	Discard	Standard	Discard
AH250C AH250P AH250M AH500C AH500P AH500M	2.38 (60.5)	2.43 (61.7)	0.16 (4.0)	0.13 (3.3)

6.0 Lubrication

6.1 Air Hoist Lubrication

6.1.1 See Section 3.0 for lubrication requirements.

6.1.2 **⚠ CAUTION** Lubrication to the motor will be provided primarily by the air supply lubricator. The recommended amount is 10-15 drops/minute (0.2-0.3cc/min.). Refer to Table 6-1 below for the approved lubricant for use with your air hoist.

6.1.3 Additional lubrication to the reduction gears is not necessary. When disassembling the hoist for service or repair, apply new grease to the gears before reassembling the hoist.

6.2 Load Chain Lubrication

6.2.1 For longer life, lightly coat the load chain with machine or gear oil. Ensure that the oil is applied to the bearing surfaces of the load chain links.

6.2.2 The load chain lubrication should be accomplished after cleaning the load chain with acid free cleaning solution. Use approved lubricant in Table 6-1 or equivalent.

6.2.3 For dusty environments, it is acceptable to substitute a dry lubricant.

6.3 Hooks and Suspension Components

6.3.1 Hooks - Bearings should be cleaned and lubricated at least once per year for normal usage. Clean and lubricate more frequently for heavier usage or severe conditions.

Lubrication	Grade	Application	Part Location
Turbine Oil	ISO VG 32-56 or equivalent	Air motor	Lubricator
Machine or gear oil	ER1BS1951 or ISO VG 46-68 equivalent	Load chain & pocket wheel	Load chain
Grease	National Lubricating Grease #3	Hook bearings	Top & bottom hook sets
Gears/Bearings	National Lubricating Grease #3	Gears & Bearings	Gear & Motor Section

7.0 Maintenance and Handling

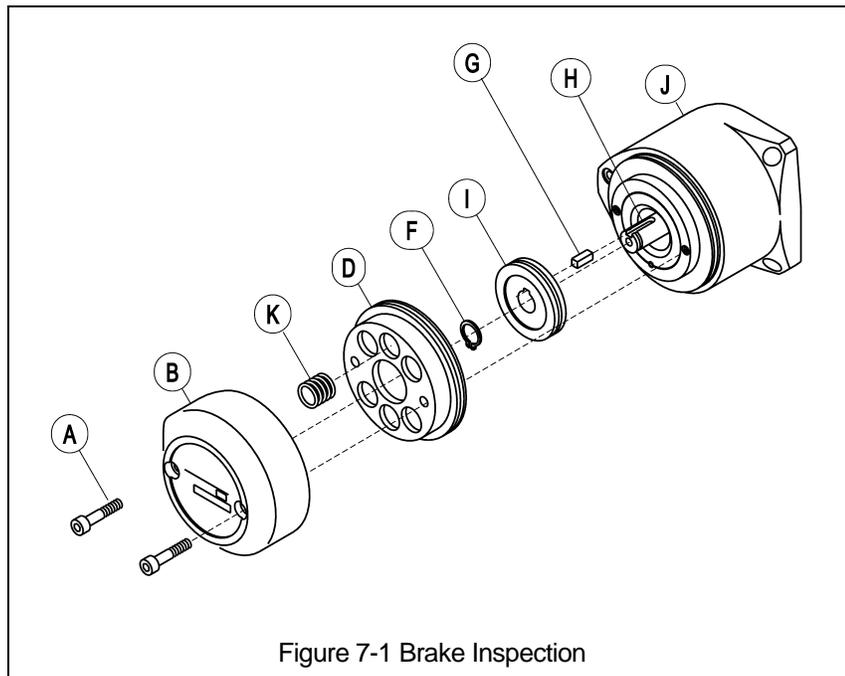

7.1 Brake

7.1.1 The hoist brake is not adjustable.

7.1.2 Inspect the brake disc in accordance with Section 5.7, Table 5-3.

7.1.3 The following is the hoist brake inspection procedure. Refer to Figure 7-1.

- 1) **⚠️ WARNING** HAZARDOUS AIR PRESSURE IS PRESENT IN THE HOIST, IN THE SUPPLY OF COMPRESSED AIR TO THE HOIST, AND IN THE CONNECTIONS BETWEEN COMPONENTS. Shut off the air supply and stop the airflow completely. Lock out and tag out in accordance with ANSI Z244.1 "Personnel Protection -Lockout/Tagout of Energy Sources".
- 2) Gradually and evenly back out 2 Hex Socket Cap Screws (A) from Brake Cover (B) from Gear Case (J) to slowly decrease spring tension (K) of Brake Piston (D) against Brake Disc (I).
- 3) Remove Brake Cover (B), Brake Piston (D), Springs (K), and O-Rings from Gear Case (J). Set parts aside for reassembly.
- 4) Remove Retaining Ring (F) on Pinion Shaft (H) adjacent to Brake Disc (I).
- 5) Remove Brake Disc for inspection and measurement and then remove the Key (G) from the Pinion Shaft (H). Refer to "Motor Brake" in Table 5-3, "Hoist Inspection Methods and Criteria".
- 6) Prior to reassembly, clean all surfaces of debris, dirt and loose paint. Apply a light film of grease to all O-Ring seals.
- 7) Reassemble in reverse order. Torque all mounting hardware evenly during the reassembly process.

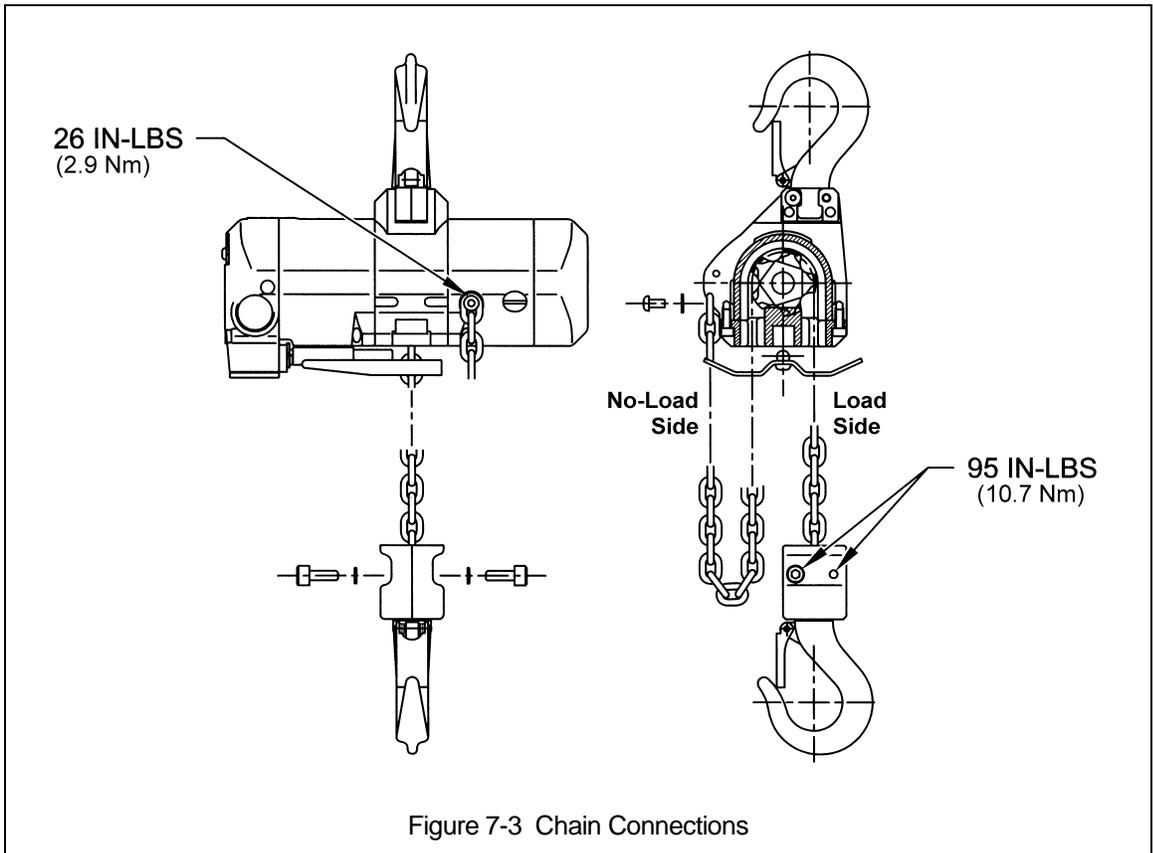

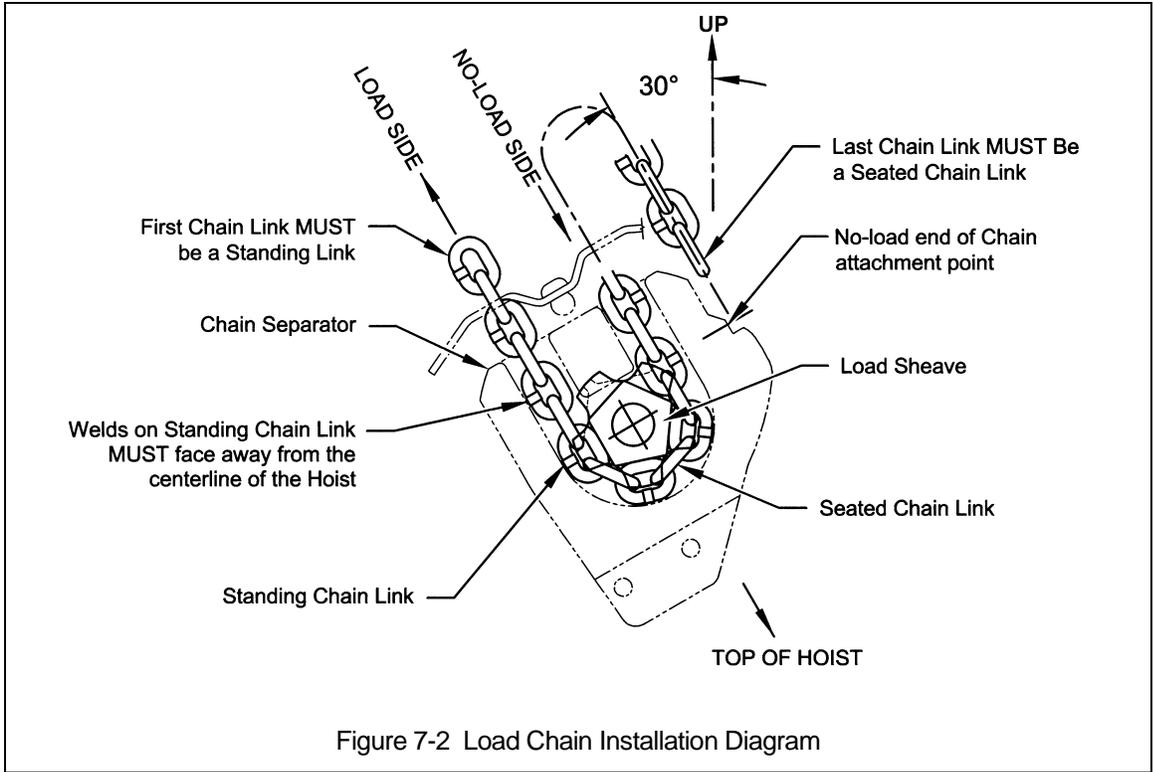

7.2 Load Chain

7.2.1 Lubrication and Cleaning

- Clean the chain with an acid-free cleaning solution. The load chain should be kept clean and lubricated.
- Lubrication - Clean and lubricate the load chain per Section 6.0 at least once every 3 months for normal usage. Clean and lubricate more frequently for heavier usage or severe conditions.

7.2.2 Replacement

- 1) **⚠ CAUTION** An air supply line must be connected to the hoist in order to perform the following procedures.
- 2) **⚠ WARNING** Be certain that the replacement chain is obtained from Harrington and is the exact size, grade and construction as the original chain. The new load chain must have an even number of links so that the end links are oriented 90° from each other.
- 3) Remove the Bottom Hook Complete Set and Button Head Screw connecting the no-load end of the chain to the hoist body. Keep the Bottom Hook Complete Set and Button Head Screw for reuse on new chain. Carefully operate the hoist in the down direction to remove old chain.
- 4) **⚠ CAUTION** When replacing load chain, check for wear on mating parts, i.e. Load Sheave, Chain Guides, Bottom Hook Complete Set and replace parts if necessary. If the load chain is being replaced due to damage or wear out, destroy the old chain to prevent its reuse.
- 5) **⚠ CAUTION** Invert the hoist such that the chain separator openings are facing up and tilt the hoist approximately 30° as shown in Figure 7-2. Insert the chain into the chain separator on the no-load side opening making certain that the first link is a standing link and that its weld is facing away from the centerline of the hoist.
- 6) **⚠ CAUTION** Operate the hoist as slowly as possible in the down direction to catch the Load Chain and pull it through the hoist. Make sure the chain feeds smoothly while operating the hoist. If binding occurs, stop and reverse the hoist direction to the back the chain out. Reinsert the chain again while gradually operating hoist controls. Continue until a sufficient quantity of Chain is fed through the hoist to attach the Bottom Hook Complete Set.
- 7) Ensure that of the Chain remains free of twists and attach the no-load end of the chain to the hoist body with the Flat Washer and Button Head Screw. Reinstall the Bottom Hook Complete Set. Torque the Button Head Screw to 26 in-lbs (2.9 Nm). and the Bottom Hook's Socket Bolts to 95 in-lbs (10.7 Nm). Refer to Figure 7-3.
- 8) After installation has been completed, perform steps outlined in Section 3.14 "Pre-operational Checks and Trial Operation".

7.3 Pendant and Manipulator

7.3.1 The following procedure covers the installation of the molded tubing version of the Pendant Hose (Parts List Figure Number 154) and the Pendant Valve CP. Refer to Figure 7-4.

- 1) Place boots on the ends of the Pendant Hose.
- 2) Firmly press the individual color-coded pendant tubes completely into the Tube Fittings on the Pendant Valve CP and Manifold Block until they bottom out. Refer to Figure 7-4 for the correct placement of the tubes.
- 3) If it is necessary to remove the tubes, press the release ring on the Tube Fitting at the tube inlet and the tube is released.
- 4) Slide the Boots into place over the Tube Fittings at the Manifold Block and Pendant Valve CP.
- 5) **⚠ CAUTION** Operate hoist and make sure the direction of hook travel agrees with the control levers on the Pendant Valve CP.

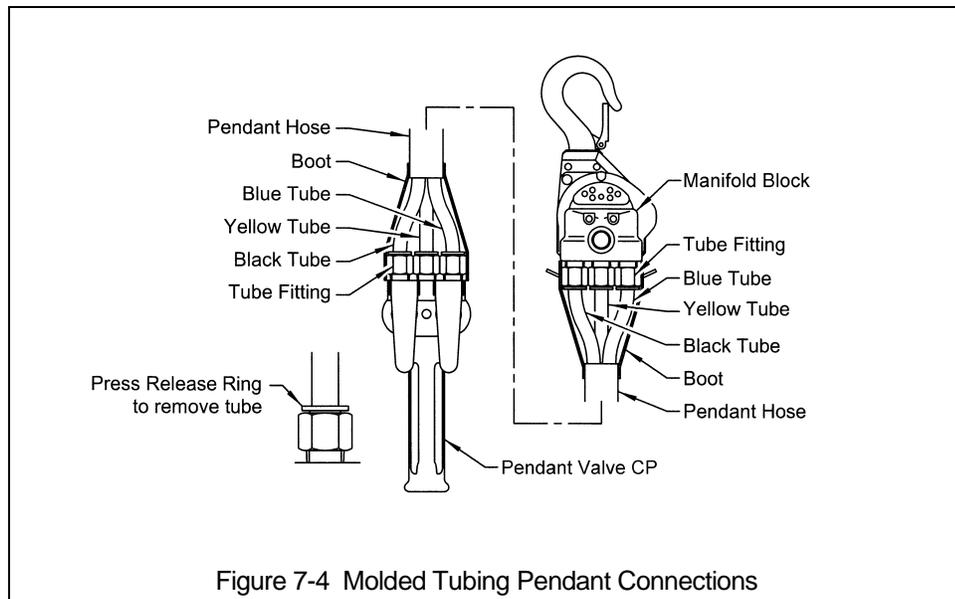

Figure 7-4 Molded Tubing Pendant Connections

7.3.2 The following procedure covers the installation of the 3 Hose version of the Pendant Hose (Parts List Figure Number 153) and the Pendant Valve CP. Refer to Figure 7-5.

- 1) Place boots on the ends of the Pendant Hoses.
- 2) Unscrew the Threaded Sleeves from all Hose Fittings and place them on the ends of the Pendant Hoses.
- 3) Firmly press the Pendant Hoses completely into the Hose Fitting Nipples on the Pendant Valve CP and Manifold Block. Tighten the Threaded Sleeves onto the Hose Fittings until they bottom out. Refer to Figure 7-5 for the correct placement of the Hoses.
- 4) Attach the Strain Relief Chain to the Eye Bolts on the Pendant Valve CP and Manifold Block using the S-Type Wires.
- 5) Slide the Boots in to place over the Hose Fittings at the Manifold Block and Pendant Valve CP.
- 6) **⚠ CAUTION** Operate hoist and make sure the direction of hook travel agrees with the control levers on the Pendant Valve CP.

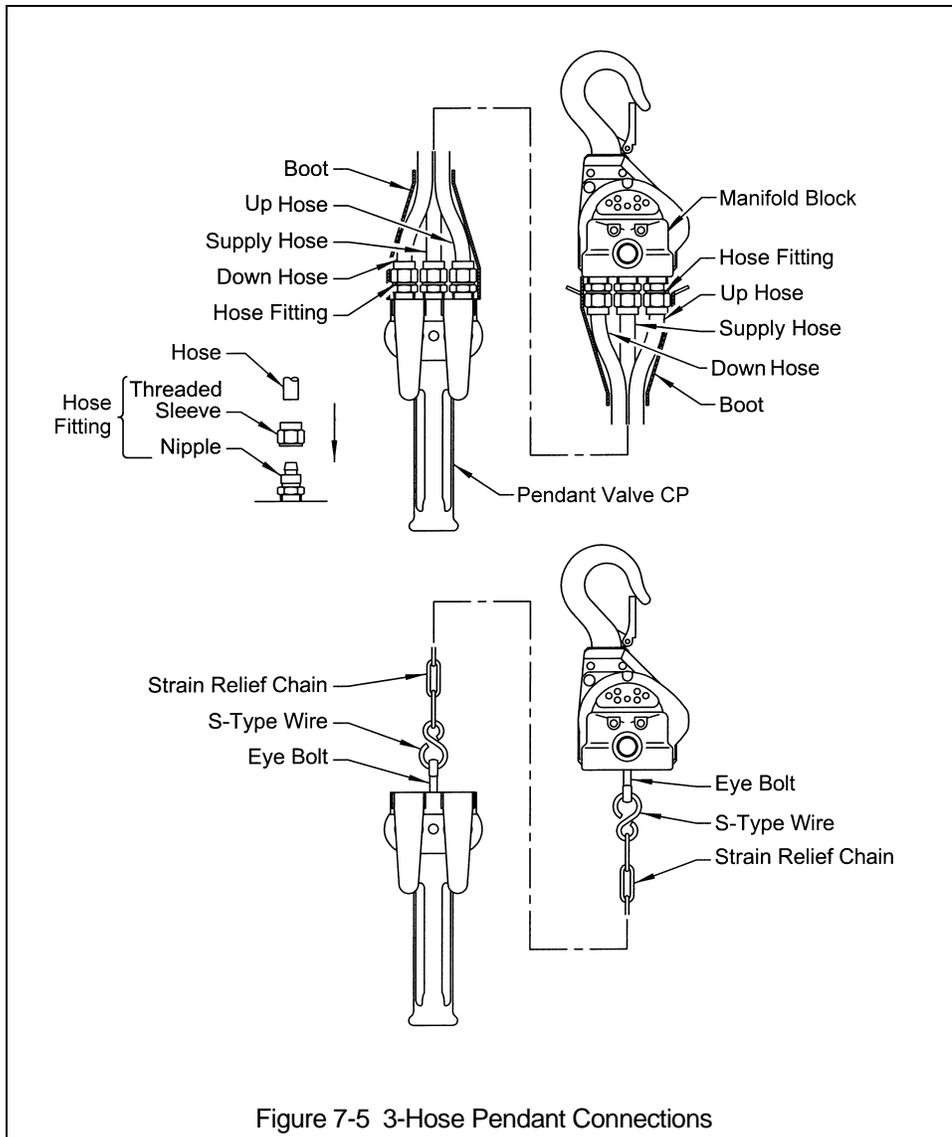

Figure 7-5 3-Hose Pendant Connections

7.3.3 The following procedure covers the installation of the Coil Hose (Parts List Figure Number 202) onto the Manifold Block and Manipulator Control. Refer to Figure 7-6.

- 1) Insert all 3 hoses through the large opening in the Hose Support. Slide the Hose Support around approximately 1 coil of the hose.
- 2) At the hoist, insert all 3 hoses through the Hose Arm attached to the hoist body then insert the Down Tube through the small opening in the Hose Support.
- 3) Firmly press the 3 Pendant Hoses completely into the Hose Fittings on the Manifold Block until they bottom out. Refer to Figure 7-6 for the correct placement of the Hoses.
- 4) At the Manipulator Control, insert all 3 hoses through the Hose Hole on the Manipulator Control.
- 5) Firmly press the 3 Pendant Hoses completely into the Hose Fittings on the Manipulator Control until they bottom out. Refer to Figure 7-6 for the correct placement of the Hoses.
- 6) **CAUTION** Operate hoist and make sure the hook travel is in the same direction as shown on Manipulator Control.

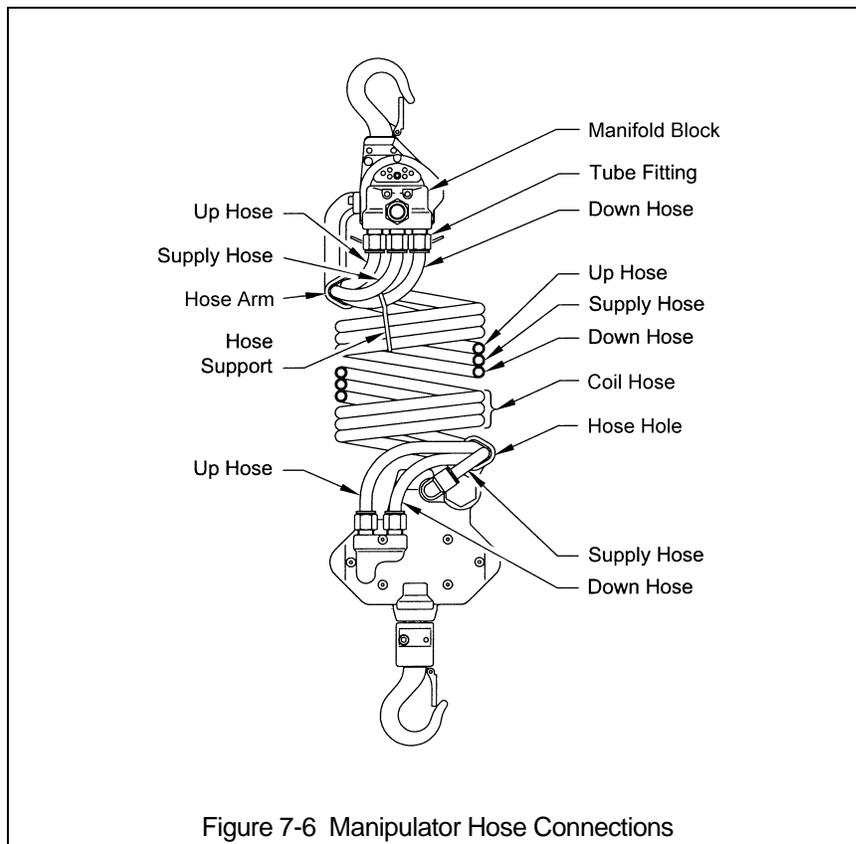

Figure 7-6 Manipulator Hose Connections

7.4 Load Sheave Inspection

7.4.1 Perform this inspection by removing the chain separator and viewing the load sheave while operating the hoist slowly, with no load, and in accordance with Section 4 "Operation". Refer to Figure 7-7 and remove the chain separator as follows:

- 1) **CAUTION** An air supply line must be connected to the hoist in order to perform the following procedures.
- 2) Remove the 2 Button Head Screws attaching the chain lever to the limit shaft.
- 3) Remove 2 Socket Bolts attaching the Chain Separator to the Wheel Housing and drop the Chain Separator down.
- 4) Inspect the Load Sheave. Refer to "Load Sheave" in Table 5-3, "Hoist Inspection Methods and Criteria".
- 5) Reverse the procedure to reassemble the hoist.

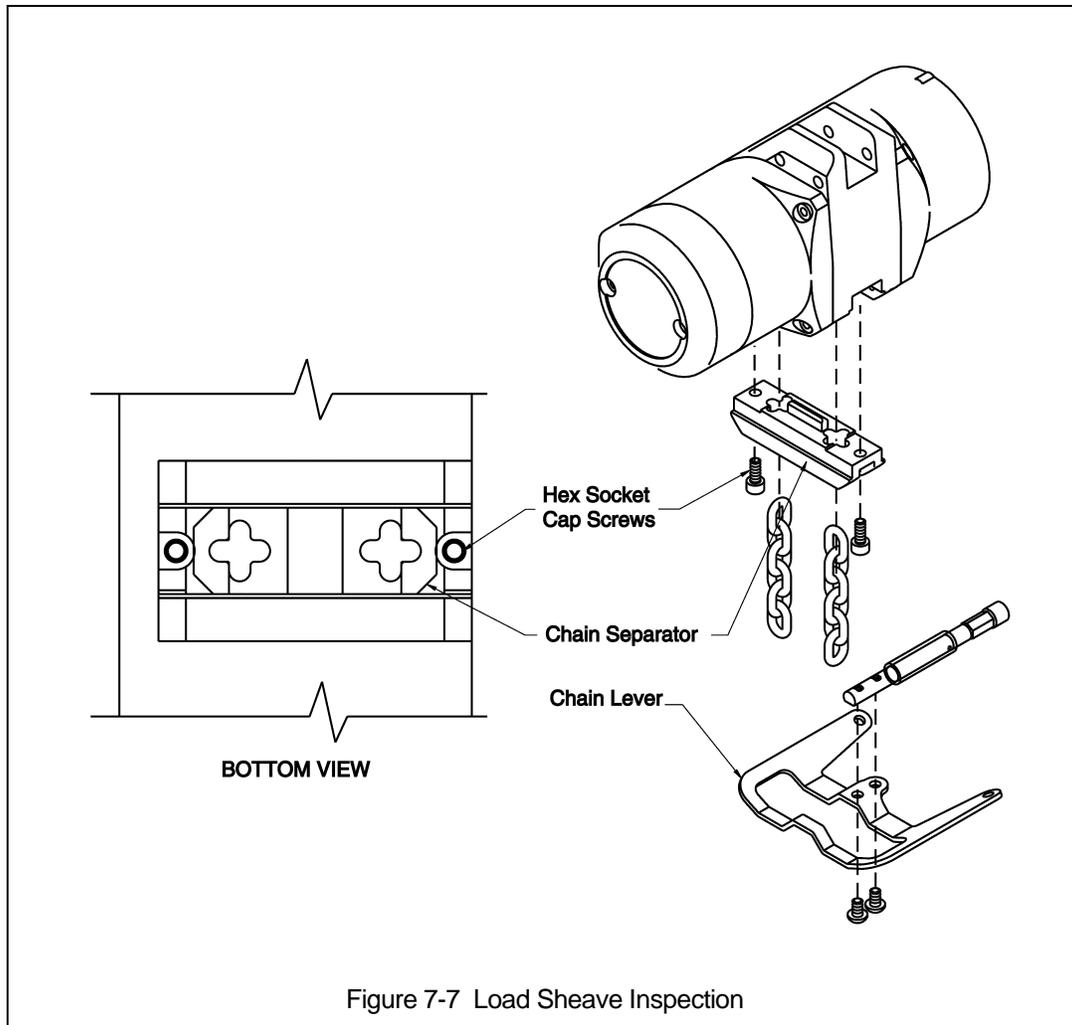

Figure 7-7 Load Sheave Inspection

7.5 Storage

7.5.1 Whenever the hoist is to be placed into storage, place extra lubricating oil into the air inlet opening and circulate the air motor before plugging the inlet. Make certain that no debris, dirt or moisture is allowed to enter the air hoist through air inlet opening during preparations for storage.

7.5.2 The storage location should be clean and dry.

7.6 Outdoor Installation

7.6.1 For hoist installations that are outdoors, the hoist should be covered when not in use.

7.6.2 In order to prevent internal corrosion from occurring, the hoist must be operated using proper quality air at least once per week by raising and lowering the hoist one full cycle. Note: the possibility of corrosion in the valve section of the hoist increases for areas where salt air and high humidity are present. For such situations you may need to operate your hoist more often than once per week.

8.0 Troubleshooting

WARNING

HAZARDOUS AIR PRESSURE IS PRESENT IN THE HOIST, IN THE SUPPLY OF COMPRESSED AIR TO THE HOIST, AND IN CONNECTIONS BETWEEN COMPONENTS.

Before performing ANY maintenance on the equipment, de-energize the supply of compressed air to the equipment, and lock and tag the supply device in the de-energized position. Refer to ANSI Z244.1, "Personnel Protection - Lockout/Tagout of Energy Sources."

Only Trained and competent personnel should inspect and repair this equipment.

Table 8-1 Troubleshooting Guide

Symptom	Cause	Remedy
Does not operate	Lack of air pressure or loss of air supply.	Repair or adjust air supply or filters.
	Seizure of Main Spool, brake Shuttle, or Air Motor.	Repair at service facility.
	Seizure of brake or brake mechanism fails to release.	Repair at service facility.
	Hoist is overloaded.	Reduce the load to the rated capacity of hoist.
Lifting speed is slow	Low air pressure at hoist inlet port.	Repair or adjust air supply or filters. Check for air line obstruction.
	Air supply hose or piping is too small.	Replace hose or piping sizes with recommended sizes in Section 3.0 .
	Malfunction of brake.	Repair at service facility.
	Lack of sufficient oil in air supply to hoist	Increase oil in air supply to hoist in accordance with requirements in Section 3.0 .
	Exhaust Silencer S or Silencer F clogged	Clean or replace.
	Air flow capacity of compressed air system insufficient	Increase air flow capacity of compressed air system to requirements in Section 2.0 .
	Air motor Vanes or bearings worn	Repair at service facility.
	Air supply to hoist contains dirt or debris	Filter the air supply to the hoist in accordance with the requirements in Section 3.0 .
Unable to lift rated load	Lack of air pressure or loss of air supply.	Repair or adjust air supply or filters.
Hoist lowers but will not lift	Hoist is overloaded.	Reduce load to hoist rated capacity.
	Lack of air pressure or partial loss of or leakage in air supply.	Repair or adjust air supply or filters.

Table 8-1 Troubleshooting Guide

Symptom	Cause	Remedy
Hoist continues running after pendant or cord is released	Main Spool sticking	Inject approx. 20 drops of oil into inlet port to lubricate the main spool. If spool still sticks, repair at service facility.
	Valve Spring broken	Repair at service facility
	Main Spool leaking	Repair at service facility
	Valve in Pendant Valve CP stuck	Repair at service facility
Hoist drifts excessively when hoist is stopped	Brake is not holding.	Repair brake at service facility.
	Motor Vanes leaking.	Replace motor Vanes at service facility.
Hoist moving in wrong direction	Mis-connected Pendant Hose assembly.	Reconnect Pendant Hose correctly.

9.0 Warranty

All products sold by Harrington Hoists, Inc. are warranted to be free from defects in material and workmanship from date of shipment by Harrington for the following periods:

- 1 year – Electric and Air Powered Hoists (excluding (N)ER2 Enhanced Features Models and EQ/SEQ Models), Powered Trolleys, Powered Tiger Track Jibs and Gantries, Crane Components, Below the Hook Devices, Spare / Replacement Parts**
- 2 years – Manual Hoists & Trolleys, Beam Clamps**
- 3 years – (N)ER2 Enhanced Features Hoists, EQ/SEQ Hoists, and RY Hoists**
- 5 years – Manual Tiger Track Jibs and Gantries, TNER, EQ/SEQ, and RY Hoist Motor Brakes**
- 10 years – (N)ER2 “The Guardian” Smart Brake**

The product must be used in accordance with manufacturer's recommendations and must not have been subject to abuse, lack of maintenance, misuse, negligence, or unauthorized repairs or alterations.

Should any defect in material or workmanship occur during the above time period in any product, as determined by Harrington Hoist's inspection of the product, Harrington Hoists, Inc. agrees, at its discretion, either to replace (not including installation) or repair the part or product free of charge and deliver said item F.O.B. Harrington Hoists, Inc. place of business to customer.

Customer must obtain a Return Goods Authorization as directed by Harrington or Harrington's published repair center prior to shipping product for warranty evaluation. An explanation of the complaint must accompany the product. Product must be returned freight prepaid. Upon repair, the product will be covered for the remainder of the original warranty period. Replacement parts installed after the original warranty period will only be eligible for replacement (not including installation) for a period of one year from the installation date. If it is determined there is no defect, or that the defect resulted from causes not within the scope of Harrington's warranty, the customer will be responsible for the costs of returning the product.

Harrington Hoists, Inc. disclaims any and all other warranties of any kind expressed or implied as to the product's merchantability or fitness for a particular application. Harrington will not be liable for death, injuries to persons or property or for incidental, contingent, special or consequential damages, loss or expense arising in connection with the use or inability whatever, regardless of whether damage, loss or expense results from any act or failure to act by Harrington, whether negligent or willful, or from any other reason.
