PULS: The Technology Leader

Efficient - Reliable - Innovative

When Bernhard Erdl founded PULS in 1980, he and a small group of developers shared a common vision: to design and develop the most technologically advanced switched mode power supplies. For more than 40 years, many PULS innovations and user-friendly features, including DIN-Rail mounting, power reserves and expanded operating temperature ranges, have become industry standards. Today, PULS is the global market and technology leader as we continue the original vision under Mr. Erdl's leadership as the company's CEO & Chief Developer.

PULS dedicates 100% of company resources and efforts to the design, development and production of DC power products that provide users with the lowest total cost of ownership through industry leading energy efficiency ratings, small form factors and long service lifetimes. With more than 100 R&D Engineers throughout the world, our singular focus and commitment to innovation creates unique products, designed for the demanding requirements in today's manufacturing environments, without the need to oversize or purchase unneeded features.

Innovation can be found throughout PULS, from the inspiring global headquarters in Munich, Germany,

to our two state-of-the-art, fully redundant manufacturing facilities. All PULS products are manufactured in plants wholly owned and operated by PULS in the Czech Republic and China. During customer site visits and audits, our plants are repeatedly praised for their streamlined, efficient production processes and environmentally-friendly design.

To assure availability and timely delivery, we stock every product listed in this Selection Guide in our North American HQ located in the Chicago suburbs. Our extensive product offering provides solutions for individual application requirements across numerous market segments, including automotive, intralogistics and material handling, semiconductor, food and beverage, process automation, alternative energy, intelligent traffic solutions and many others.

As the DC power specialists, the talented and experienced PULS team is ready to help you select the right PULS product(s) for your individual application requirements. I invite you to contact our customer service, application support or sales team to see how we can help you.

Matt Biskner, President, PULS, L.P.

Suzhou China Production Plant

Reasons to Choose PULS

Efficiency

- » **Highest** Energy Efficiency Ratings
- » Lower Heat Generated in the Enclosure Allows a Longer Lifetime for All Components in the System
- » Lowest Energy Consumption for the User

Broad Product Range

- » **DIN-Rail** & **Machine Mount** Single & 3-Phase AC & DC Input Power Supplies
- » DC/DC Converters
- » DC-UPS Controllers with Individual Battery Monitoring & Charging
- » Redundancy Modules & Redundant Power Supplies

DC Power Specialists

- » DC Power Products are our **ONLY** Business
- » Market Education & Training Leader
- » Extensive Datasheets with Guaranteed Test Data You Can Rely On

Engineering Resources

- » PULS Employs more than 100 Engineers & Technicians Exclusively Dedicated to the Design & Development of Industrial DC Power Products with Leading Technologies
- » Continually Developing & Introducing **Next Generation** DC Power Solutions

Long Life of Product Families

- » PULS is Committed to Keeping Standard Items in Production for an Extended Length of Time
- » Eliminates Forced Changes in Customer Designs due to Obsolescence
- » **Availability** You Can Count On for Many Years

Control of Supply Chain & Manufacturing

- » **Significant Inventory** Levels in North America to Meet Your Requirements
- » From Development to Shipment – the Entire Process is Controlled by PULS
- » Two Ultra Modern Production Facilities

Lowest Total Cost of Ownership (TCO)

- » Small Footprints Allow for Smaller Enclosures
- » Lower Heat Generation also Allows for Smaller Enclosures
- » **Long Service Life** Reduces Replacement Costs
- » Less Energy Consumed to Produce the Same Power

Quality & Lifetime

- » Longest Lifetime in the Industry
- » **Quality** is Assured with Every Product
- » Performance Values in Datasheets are Guaranteed
- » 100% Product Burn-in

Customer Service & Application Assistance

- » Application **Engineering Support** to Help You Select the Right PULS Product for Your Application
- » Highly Trained Sales Reps Available for Local Support
- » Friendly & Responsive Customer Service Team to Assist You with Availability & Delivery Inquiries

Technology Leader

- » Advanced Design Techniques Utilized to Lead the Market in Product **Innovations**
- » PULS Implements the Latest Components & Technologies for Maximum Performance
- » Highly Automated Manufacturing & Testing Lines Ensure Reliability

The Perfect Power Supply for Every Application

FIEPOS

Electronic Circuit Breakers

PISA-B: 8 CHANNEL, 24V ELECTRONIC CIRCUIT BREAKERS FOR LOAD & POWER PROTECTION

Features:

- » 8 Current-Controlled Output Channels with Individual Tripping
- » Adjustable Output Currents for Each Channel (Except NEC Class 2 models)
- » Selective Tripping of Overloaded Channels (Except NEC Class 2 models)
- » Output Currents Displayed Live on LED Matrix
- » Remote or Local Reset
- » ON/OFF Feature for Each Individual Output
- » 52mm Width (6.5mm per Channel)
- » Bus Bars Available for Connecting Multiple Units

Catalog Number	Input Voltage	Output Voltage	Max Output Power	Features
PISA-B-812-B1	24V	24V	40A	8 output channels: 2x 1-12A, 6x 1-10A; common alarm signal
PISA-B-8CL2-B1			30A	8 output channels: 8x NEC Class 2; 3.75A per channel; common alarm signal
PISA-B-812-B4			40A	8 output channels: 2x 1-12A, 6x 1-10A; digital coded alarm signal
PISA-B-8CL2-B4			30A	8 output channels: 8x NEC Class 2; 3.75A per channel; digital coded alarm signal

PISA-B

PISA11 4 CHANNEL MODEL

Features:

- » 4 Output Channels
- » Automatic Tripping of all Channels During Fault Conditions
- » Visible Channel Indication During Fault Conditions
- » Remote or Local Reset
- » ON/OFF Feature for Entire Unit
- » Input Voltage Protection
- » 45mm Width

FIELD POWER SUPPLY

DECENTRALIZED, CABINET-FREE POWER SUPPLIES

The need for flexible, modular systems is shaping machine design and system engineering. Decentralization of the system components has proven to be an important factor for success. It speeds up system planning, simplifies maintenance and enables easy expansion of the system. In addition, control enclosures can be replaced by smaller versions or even completely eliminated.

CONFORMAL COATED

Redundancy

Redundant Systems without Redundancy Modules

With the CP Series, PULS offers a unique feature: Power supplies with an integrated redundancy based on efficient MOSFET technology. This means there is no need for additional redundancy modules for 1+1 and N+1 redundant systems. These units are available with removable plug connectors or spring clamp terminals.

Space Savings

PULS integrated the decoupling feature into the standard CP housings. This means the size of the units are identical to those of the standard CP10 (39mm) and CP20 (48mm).

On-line Replacement

The models with removable plug connectors (CP10.241-R2 and CP20.241-R2 and -C1 conformal coated versions) allow the replacement of devices during live operation. If there is no need for this feature or if heavy shocks and vibrations occur regularly in the application, the screwless units (CP10.241-R1 & CP20.241-R1) are the perfect choice.

Redundancy Modules

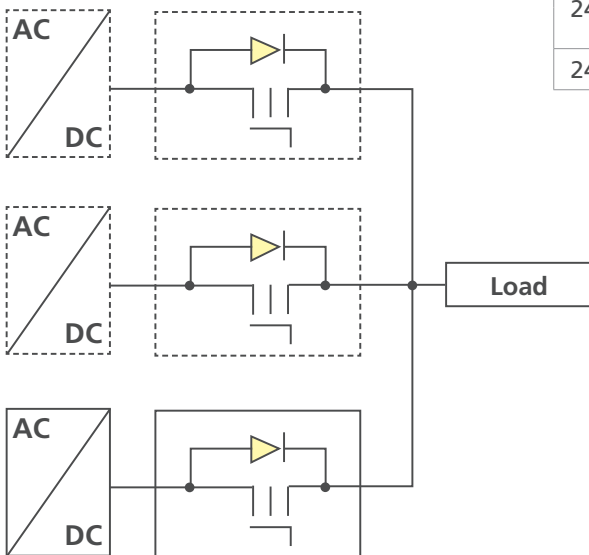

Highest System Reliability

In a redundant power supply system, two or more power supplies are wired in parallel to increase the reliability and availability of the DC voltage. The additional power supply provides backup in case one power supply fails.

The power supplies are decoupled by one or more redundancy modules. The redundancy modules isolate a fault in one power supply and protect the DC voltage for critical applications.

24V	40A	UB40.241		External, (2) 12V, 12-200Ah	

NOTE: All UPS controllers and buffer modules require a 24VDC input from a power supply or other source.

DC-Backup

Buffer Modules with Capacitor Storage

The PULS DC-UPS with integrated electro-chemical double layer capacitors (EDLC or Ultracaps) are fully maintenance free and guarantee uninterrupted power from seconds to minutes. Buffer modules with electrolytic capacitors can bridge power failures for 24V or 48V bus for milliseconds to seconds.

Unlike DC-UPS systems that utilize batteries, regular replacement of the capacitors is not necessary. In buffer mode, the output voltage is regulated and the change from normal to buffer mode occurs without interruptions. All modules are protected against overload and short circuit.

DC-Backup

DC-UPS with Battery Storage

The installation of a DC-UPS system requires three essential elements: a power supply, a DC-UPS controller and a battery. The DC-UPS controller is responsible for monitoring and charging the battery, as well as controlling the seamless transition between Normal and Backup mode.

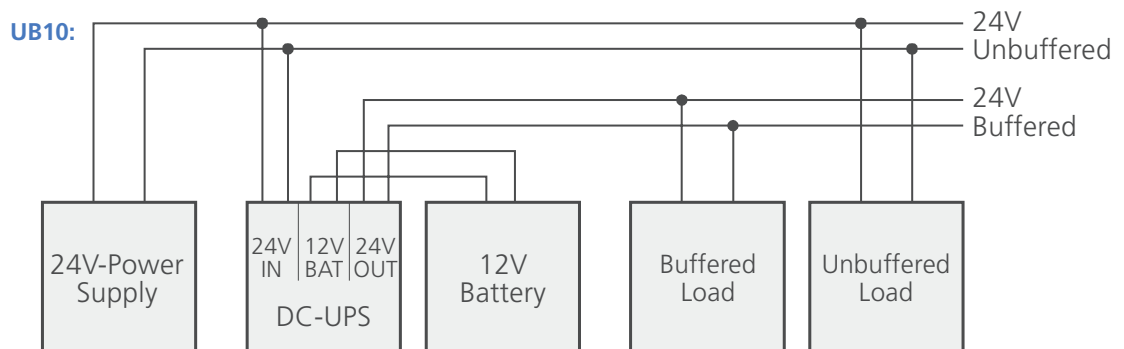

Advantages of the PULS DC-UPS Controllers:

- » 1-Battery Concept: Each Battery is Individually Charged & Monitored to Maximize Battery Life
- » No Need for Matched Batteries
- » Output De-coupled from the Input, Allowing Buffered & Unbuffered Branches
- » Fixed Output Voltage in Backup Mode for UB10 & UB20 models
- » 22.5-26V Adjustable Output Voltage in Backup Mode for the UB20.241
- » Selectable Backup Time Limiter to Extend Battery Life (on select models)
- » 50% Power Reserves for 5 Seconds

The UB10, UB20 and UB40 tables show approximate typical buffer times of new battery modules without the aging effect included. PULS recommends adding 30-50% battery capacity to account for battery wear and aging. Please review specific datasheets for additional buffer times.

DC-UPS WITH BATTERIES

DC-Backup

Battery Modules for DC-UPS

Battery modules use maintenance-free VRLA batteries (valve regulated lead-acid). Battery modules can be ordered with a battery (UZK Series) or without a battery (UZO Series). All battery modules from PULS support the 1-Battery Concept. The 24V battery modules for use with the UB20 and UB40 battery modules from PULS' Series are equipped with a center-tap, which are protected against overcurrent and with an integrated temperature sensor. Users who opt for using their own batteries should use a high-quality VRLA, Gel Cell or Glass Mat battery. When using batteries for the UB20 and UB40 Series, it is recommended to use the appropriate sensor board with a PT1000 temperature sensor included, and a center-tap to take advantage of the PULS 1-Battery Concept.

Catalog Number	Description	Dimensions (W x H x D)
UZB12.051	12V, 5Ah replacement battery for UBC10.241	90 x 106 x 70mm
UZB12.071	12V, 7Ah replacement battery for UZK12.071 and UZK24.071 a)	151 x 100 x 65mm
UZB12.121	12V, 12Ah replacement battery for UZK24.121 a)	151 x 100 x 98mm
UZB12.261	12V, 26Ah replacement battery for UZK12.261	175 x 166 x 125mm
UZK12.071	12V, 7Ah battery module for UB10	155 x 124 x 112mm
UZK12.072	12V, 7Ah battery module for UB10 (Class I Division 2)	155 x 124 x 112mm
UZK12.261	12V, 26Ah battery module for UB10	214 x 179 x 153mm
UZK24.071	24V, 7Ah battery module for UB20	137 x 186 x 124mm
UZK24.121	24V, 12Ah battery module for UB20	203 x 186 x 124mm
UZK24.122	24V, 12Ah battery module for UB40	203 x 186 x 125mm
UZK24.262	24V, 26Ah battery module for UB40	214 x 179 x 167mm
UZK24.262-E1	24V, 26Ah Battery Module with Battery extension kit included	214 x 179 x 128mm
UZO12.07	Mounting Bracket for use with 7Ah Battery	155 x 124 x 112mm
UZO12.072	Mounting Bracket for use with 7Ah Battery (Class I Division 2)	155 x 124 x 112mm
UZO12.26	Mounting Bracket for use with 26Ah Battery	214 x 179 x 153mm
UZO24.071	Mounting Bracket for use with 7Ah Battery Pair for UB20	137 x 186 x 124mm
UZO24.121	Mounting Bracket for use with 12Ah Battery Pair for UB20	203 x 186 x 124mm
UZO24.122	Mounting Bracket for use with 12Ah Battery for UB40	203 x 186 x 125mm
UZO12.262	Mounting Bracket for use with 26Ah Battery for UB40	214 x 179 x 167mm
UZO24.262-E1	Battery extension kit for 26Ah Batteries	214 x 179 x 128mm
UZS24.100	Sensorboard with PT1000 temperature sensor and center-tap for use with UB20.241	23 x 110.5 x 15mm
UZW24.100	Wiring kit for UB40 for Batteries up to 26Ah not supplied by PULS. Includes connection cables.	
UZW24.101	Connection module for UB40 for larger batteries not supplied by PULS. Cables not included.	

a) Two required for UZK24 battery modules

Accessories

Mounting Brackets

Mounting brackets for panel mounting without the need for DIN-Rail. Other brackets are for sideways installation of the power supplies with or without DIN-Rail for control cabinets which do not have the required installation depth.
